Inside: 7 Easy-to-Type Programs

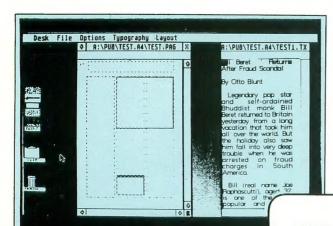

# DESKTOP PUBLISHING ON THE ATARI ST

Now there's a real alternative 68000-based desktop publishing system!

Fleet Street Publisher provides all the features you would expect of a high-priced system but at a price you can afford.

The program runs under GEM, so it's friendly and very easy to use. Working on a whatyou-see-is-what-you-get principle, designing good page layouts becomes almost intuitive, with true-to-scale fonts and images displayed on the screen.

# Use it to create

- Multi-column newsletters and publications
- Advertising layouts and brochures
- Business reports and contracts
- Promotional literature and specification sheets
- Flyers and overhead transparencies
- Organization charts and flow charts
- Invitations and announcements
- Menus, cards, letterheads and much more

# Special features

- Point sizes from 4 to 72 (up to 216 on a 1040)
- Over 150 ready-made graphics images supplied on disk
- Up to 7 windows open at any one time
- International characters included
- User controllable letters, word and line spacing
- 14 levels of shading for boxes
- Edit text in one window and feed straight into the page in a second window
- Includes art conversion program to convert other ST graphics files

# Systems Requirements

- -Atari 520 ST minimum
- -Monochrome OR color monitor
- -Epson and compatible dot matrix printers
- -Laser printers including Postscript and Hewlett Packard Laser Jet

Fleet Street Publisher is available from your local dealer

# PRICE GUARANTEE

Since 1981, we have led the industry by continuing to offer the lowest national prices while providing quality service. Many companies have come and gone trying to imitate our quality and service. If by some oversight we do not have the lowest prices advertised on the products you desire, then we would appreciate the opportunity to rectify this oversight.

TO ORDER, CALL TOLL-FREE: 1-800-233-8760 In PA: 1-717-494-1030

Hours: 9AM to 8PM, Mon. - Thurs. 9AM to 6PM, Friday — 10AM to 6PM, Saturday

For Customer Service, call 1-717-494-1670, 9AM to 5PM, Mon. - Fri.

# Editorial

# **Practical Applications Winners**

his issue features the four winners of Antic's first 8-bit Practical Applica tions Contest. We received close to 200 entries during the six months that the contest was open. And at least half of the entries arrived during the final two weeks of the competition.

It was extremely heartening to see such an outpouring of programming talent for the 8-bit Atari. We accepted over 30 of the program entries for publication, most of them from that final deadline batch.

Because we now have such a good backlog of 8-bit applications, Antic will begin a new section next month -the Featured Practical Program. Starting in December, each issue will contain at least one type-in practical application for the 8-bit—if not more.

# **ABOUT THE WINNERS**

The Grand Prize Winner was Critical Path Project Manager by David Schwener, which uses industry's CPM and Gantt Chart techniques of organizing workloads. Aside from being very useful for a wide range of personal and small-business activities, this software is written in an impressively clean and well-organized programming style.

Schwener, a product engineer from Fayetteville, North Carolina, is making his first appearance in Antic. His grand prize is an Atari 1040ST computer (courtesy of MichTron Software) and \$500 of Batteries Included ST software from Electronic Arts.

The runner-up winners have all had other programs previously published here. Their prizes are one-year disk subscriptions to Antic. Each of these outstanding runner-up programs does only one job. But that job is handled very effectively and is useful to a large number of people. The runner-ups are:

 WYSIWYG Cassette Jackets by Chet Walters. Millions of musiclovers make personal copies-or

compilations—of their favorite commercial albums and tapes. Now you can bring pleasing order to the chaos of your cassette collection and instantly know exactly what music you have placed on each cassette.

- Bibliography Writer by Alfred Filskov. All students in high school and college are going to have to turn out significant amounts of written term papers during their educational careers. Term papers usually require bibliographies of source material. But now your Atari can automate the maddeningly precise specialized punctuation your teachers want for bibliographies.
- Your Best Route by Jeffrey Summers, M.D. Whether you are traveling for business or pleasure, this software effortlessly figures out your least expensive route between multiple destinations.

# SORRY FOR THE MIX-UP

A number of contestants wrote us that they were disappointed about getting the standard Antic rejection letter for their entries, without any specific written mention of the Practical Applications Contest. But we actually did more for entrants this time around. In previous contests, it was specified that all entries became the property of Antic and would not be returned or acknowledged.

However, we certainly apologize for upsetting anybody. It seems that the contest rules didn't make it clear enough that because all entries were being considered for publication in Antic-and all winners would get paid our regular publication rates along with their prizes—we were processing the contest entries exactly like regular magazine program submissions.

# **DISK BONUS THANKS**

With its Super Disk Bonus, Antic's disk edition is a real bargain at any price—especially at the new newsstand price of \$9.95. I was especially pleased to find that the disk bonus, Antic Writer, provided a worthy competitor to my favorite word processor—also a relatively short, fast machine language program, but lacking the right-justification of Antic Writer. Now I have the best of both worlds. Thanks again for Antic Writer.

H.J. Woods Reno, NV

# PAPER GLITCH

Now that Electronic Arts has taken over Batteries Included, I hope they'll continue debugging the PaperClip word processor. One bug that has never been fixed is the block delete function, which does weird things if you use it more than once or twice. Version 2.0 for the 130XE has a dis-

continued on page 10

About The Cover: This issue features all four winners of Antic's biggest programming competition yet—the 8-bit Practical Applications Contest. For more details about the contest results, see the editorial on the opposite page.

# **Super Disk Bonus**

# Galleons:

# Arcade-quality sea battle

This month's Super Disk Bonus, Galleons, is a flashy, colorful two-player action game that runs on Atari 8-bit computers with at least 32K memory and disk drive. You control a sailing ship with your joystick and try to sink the enemy ship. Meanwhile, avoid those razor-sharp coral reefs—not all visible—which are all around you. Galleons is written in fast-moving assembly language using the OSS MAC/65 Macro Assembler.

# SEA OF DOOM

You sailed across the Atlantic Ocean, through weather both good and bad. The journey took months, but at last you are approaching your destination—the New World. On board, everyone is relaxing, when suddenly your lookout shouts, "Reef ahead!" Instantly all hands assume their posts, and within seconds your mighty galleon is turned away from the reef.

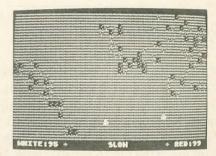

Surveying the immediate area, you realize you have now entered the coral reefs infesting the eastern end of the Caribbean Sea. But now things get even worse. "Ship ahoy!" the lookout cries. Then you see the dot on the horizon. As it comes closer, a chill grips your heart—it's the infamous Red Scourge, pirate terror of the Caribbean.

# ABOUT THE PROGRAM

Antic editors really liked this speedy, professional-quality game as soon as we first saw it. Written

entirely in MAC/65 assembly language, Galleons was a first submission to the magazine from Alan Capesius of Morton Grove, Illinois. A BASIC loader listing of Galleons would be necessary to make it useable for the majority of our readers, but this would have been too long for publication as a type-in.

Instructions for Galleons can be accessed from the Help Menu of this month's Antic Disk. Choose selection 5 on the Main Menu.

# **INSTANT DISK**

The November, 1987 Antic Disk, featuring Galleons and the Practical Applications Contest Winners, will be shipped to you within 24 hours after your order-only \$5.95 (plus \$2 for shipping and handling) on your Visa or Master-Card. Just phone toll-free to Antic's new in-house Order Service number, (800) 234-7001-Monday to Friday from 6 a.m. to 6 p.m., Pacific Time. Or mail a check for \$5.95 (plus \$2 shipping and handling) to Antic, 544 Second Street, San Francisco, CA 94107.

Now only \$5.95—Antic Monthly Disk!

# MARK WILLIAMS C. AN ENLIGHTENING DEVELOPMENT FOR ATARI ST USERS.

If you've tried your hand at developing applications on the Atari ST, you know the problem. Programming tools aren't only hard to come by, they're hard to use. One might even say primitive. But now for some enlightening news: you can have all the power, portability and versatility of the C language from a leader in professional C programming tools, Mark Williams.

# BRING YOUR PROGRAMMING UP TO SPEED.

The Mark Williams C compiler produces fast, dense code and supports the complete Kernighan & Ritchie industry standard C. You'll have access to GEM's AES and VDI libraries for programs using graphics, icons and the Atari mouse. And Mark Williams C lets you take advantage of the full 16 megabytes in Atari's 68000 microprocessor.

# STREAMLINE DEVELOPMENT WITH POWER UTILITIES.

Mark Williams C is loaded with everything you'll need for professional development. Bring the power of the UNIX environment to your Atari ST with our

# **NEW VERSION 2.0 FEATURES**

- ★ 50% faster compile time
- Improved code: 20% faster dhrystone
- Full access to AES/VDI libraries now with 200 new pages of documentation and dozens of examples
- ★ New integrated edit-compile cycle: editor automatically points to errors
- Source and object code for RAM disk cuts compile time in half
- Complete Kernighan & Ritchie C plus extensions
- Microshell Command Processor, a powerful UNIX style shell

- MicroEMACS Full Screen Editor with commented source code
- · Make Program Building Discipline
- · Complete symbolic debugger
- · Assembler, linker and archiver
- Powerful Utilities Package: one-step compiling/linking with cc command, egrep, sort, diff and more
- Over 600 pages of documentation including 120 sample C programs
- · Not copy protected

Sieve benchmark\*: Compile and link time in seconds. Mark Williams C 46.0 Megamax 78.5

# MARK WILLIAMS C FOR THE ATARI ST: \$179.95 60 DAY MONEY BACK GUARANTEE

\*Sieve benchmark from Byte, 1983, done on one double-sided floppy disk and included RAM disk

Microshell Command Processor including pipes, I/O redirection and more. Edit your program with the highly acclaimed MicroEMACS full screen editor. Accelerate and simplify compiling with *make* which finds and recompiles only those modules affected by your changes. Then, when you're ready for debugging, call on our db Symbolic Debugger with single step, breakpoint and stack traceback functions. Over 40 commands, including a linker and assembler, provide a total development package for your Atari ST.

DEPEND ON A NAME WITH A HISTORY OF PERFORMANCE.

Mark Williams C for the Atari ST is part of our growing line of C compilers. A line that includes the C compiler chosen by DEC, Intel, Wang and thousands of professional programmers. Now our Atari C compiler is earning its own reputation:

"Finally a great C compiler that exploits the power of the ST"—Sigmund Hartmann, President, Atari Software Group

"The all-around best choice for serious software development on the ST."—Douglas Weir of *ANALOG COMPUTING* 

# GET WHAT YOUR ATARI ST HAS BEEN WAITING FOR.

Mark Williams C is just what your Atari ST was

made for: powerful, professional programming. So now that you can have Mark Williams C for just \$179.95, what are you waiting for?

Ask your Atari dealer about Mark Williams C or order today by calling **1-800-MWC-1700.**\*

# PUBLISHING PARTNER"

CREATES LIKE A PUBLISHING COMPANY WITHOUT THE OVERHEAD

# SOFT LOGIK NEWS PUBLISHING PARTNER TM **HELPS YOU CREATE!**

You'll benefit by using your Atari ST to create professional quality journals, newsletters, ads, business cards, certificates, letterheads, logos, art designs, bar graphs, flow charts, even bumper stickers and all the forms you or anyone would ever need. Create just like a professional publishing company without the overhead! Publishing Partner is actually three progams in one--Word Processor, Page Lavout, and Forms Creator. Expand your potential in becoming a better writer, artist and designer with your Publishing Partner.

# AVAILABLE FOR ONLY \$149.95

### PAGE LAYOUT WORD PROCESSING

What you see is what you get! Combine text and graphics easily and quickly from existing or newly created documents. Position entire paragraphs or individual words exactly where you want them. Create one, or multiple color separations ready for printing.

Production time will never be the same-it will be much shorter!!

Just take a look at some of its features!

- **GEM** based
- Justifies right or left as you type
- Edit Multiple Columns on One Screen
- Search and Replace
- User Definable Page Size
- Bold, underline, super and subscript
- Italicize, shadow, outline
- Reverse Image
- Backslant Characters
- Mirror Image Mirror Image

Invert Image Invert Image

- Auto Headers/Footers, Page Numbers
- Easily Move Text
- Reads & Merges other files together
- Sets Tabs
- Macros
- Vertical & Horizontal Printing

Whatever you require-cutting artwork from other programs, custom logos, unique borders, unusual mastheads, digitized photos--Publishing Partner is your solution. After all, it was specially designed for you--the home and/or office Atari ST user--by the pro's who realize that there's more to your computer than just typing letters.

- Vert. and Horz. rules--Exact Alignment
- Auto Text flow for columns/pages
- Layout Multiple Columns of text
- Change columns on finished page
- Display entire page, 50%, or 25%
- Easily Re-position Text and Graphics
- Alternating Headers/Footers
- Mix Type, Fonts, and Sizes anywhere
- Adjust Sizes from 2pts to 144 pts (2")
- Adjust line spacing (leading) by points
- Import other program's graphics
- Rotate Graphic Images
- Multiple Patterns, Shades and Colors
- Enlarge & Reduce Graphics/Exact fit
- Cut, Paste & Crop Graphics
- Tool box function/Unlimited patterns
- Boxes, Circles, Arcs, Polygons, etc.
- Insert lines directly on the page
- Adjust Character Spacing
- Use Hairlines to separate columns

# FORMS CREATOR

You can create a variety of forms quickly and easily with your Publishing Partner. For example, you can create your own:

continued from page 7

tressing new bug. Sometimes it produces strange characters when printing, or there's nothing in the buffer when I do a Print Preview.

I see that the August, 1987 issue of Antic had a letter recommending the Epson FX-80 printer driver for AtariWriter Plus and the Star NL-10. I've tried Paper-Clip's FX-80 with my NX-10, and it works fairly well except that it has emphasized print as a default. Also, the PaperClip symbol for right-justification of a line makes the printer type one line per page.

> Sue Tempey Mountain View, CA

Antic has had reasonable success with the Star SG-10 driver on the PaperClip disk, but we had to modify the file. Here's how: From the DOS menu, binary-load (Option L) PRTR.COM, the printer driver construction program. At the "Do you wish to modify an existing file" prompt,

press [Y]. At the prompts, enter the control codes from your printer manual. You'll probably have to experiment a little before getting exactly the results you want.-ANTIC ED

# ONLINE, PRG

I can't tell you how pleased I am that your monthly programs are now available online. I thought that if you ever put programs on CompuServe, you'd charge a sign-up fee or a surcharge, but, thankfully, you've chosen not to. In the past, I've picked up a few copies of Antic a year, but with all the programs that will be available, I'm considering subscribing. In any case I'll be reading Antic much more frequently now that I can read about one of your type-in programs and download it easily. Thanks!

> Logan Rothstein CompuServe I.D. 72247,530

# LIVES FOR HIS XE

Our son, Nicholas, age 9, lives for his Atari 130XE and has been programming since he was four. When he was in kindergarten a visiting computer teacher said Nick was programming at a sixth-grade level, and tests he took at Arizona State University while in first grade placed him above the 99th percentile for his age. Now he creates his own games and makes great animations and graphics. We're very proud of what he can do.

We probably should mention that Nick has albinism and is legally blind. Basically that means that he's light-sensitive and needs large print to read easily. But it's amazing how small the print can be when it's a computer program that he's reading. I know he'd be happy to get letters from other Atari users.

# Help!

# TAPELESS SPREADSHEETS

If you've been unable to get usable printouts from Tapeless Spreadsheet Printer (August, 1987), it may be that your dotmatrix printer cannot download special character sets.

Tapeless works by downloading a special "sideways" character set into your printer. If you're not sure whether your printer accepts downloaded characters, check your printer manual or phone the manufacturer.

The Tapeless article states that the program supports "four major printer families-Epson FX-80, Gemini 10X, Star SG-10 and Okidata 92." Printers such as these have their own RAM for holding installed or downloaded special character sets or fonts. After installation, the printer will use this special character set as long as the power remains on. For a detailed explanation of this process, see Font Maker (Antic, March 1985).

If your printer lets you use download characters, you should refer to your printer manual for the proper loading procedure. Next, select the Tapeless loading driver (Listing 6, 7, 8 or 9) which most closely matches the procedure needed for your own printer and make the necessary modifications. Please refer to the Tapeless article and listings for additional help. If you're unfamiliar with downloading characters into your printer, you should also read the Font Maker article mentioned above!

# **GHOST WRITER**

The vertical blank routine in Ghost Writer (July, 1987) may turn your screen black and freeze your keyboard when used with some of the older Atari 400 and 800 com-

If you have this problem, simply add the line 1570 WAIT=0 -- and remember to SAVE the revised program before you RUN

Antic welcomes your feedback, but we regret that the large volume of mail makes it impossible for the Editors to reply to everyone. Although we do respond to as much reader correspondence as time permits, our highest priority must be to publish I/O answers to questions that are meaningful to a substantial number of readers.

# THE "SUPER ARCHIVER"!®

(for ATARI 1050 drives)

The ARCHIVER, touted by experts as being the most powerful BACKUP and PROGRAMING tool ever offered for Atari, has just become more POWERFUL! Announcing the "SUPER ARCHIVER"! Completely compatible with 810 Archivers and Hoppy Archivers, the "SUPER ARCHIVER" I has been designed for simple plug in installation with four easy solder connections (no desoldering or trace cutting required!). If will make your 1050 capable of desolvering or index duting frequired; in will mixe you to accordance will the DOUBLE DENSITY operation, and will allow you to COPY most "protected" disk programs! Along with the Archiver software which contains a powerful Editor, Disassembler, Custom Formatter and Custom Mapper is a fully automatic PHANTOM SECTOR Copier/Creator for backing up the "UNCOPYABLE"

- TRUE DOUBLE DENSITY
- MORE POWERFUL OS
   HI-SPEED read/write
   HI POWERED BACKUP PROGRAM
   SIMPLE INSTALLATION
- AUTOMATIC PHANTOM SECTOR MAKER
   ARCHIVER COMPATIBLE
   FUTURE SOFTWARE EXPANDABLE
   BUILT IN EDITOR, CUSTOM FORMATTER
  DISASSEMBLER, MAPPER, ETC.

If your into creating your own protection, the "SUPER ARCHIVER"! will also allow you to FUZZ any sector or sectors (any number of BYTES within starting at any BYTE number!) instantly! Only \$69.95 plus \$4.5/H

### THE ELECTRONIC \$49.95 "PHANTOM SECTOR MAKER"!

Installs quickly into any drive (no soldering required). Makes precise FUZZY or PHANTOM sectors instantly Fully adjustable capability allows you to FUZZ various portions of any sectors or the entire sector itself. Will allow you to ACKUP most protected programs which do not contain custom formats using your unmodified drive and will add considerable COPYING POWER to existing HAPPY, ARCHIVER, KLONE II or DUPLICATOR DRIVES Includes special software which will FIND and DISPLAY valid data, CRC errors and PHANTOM SECTORS all automatically! Copy program works in single or double density and takes advantage of all available memory for making single pass copies! Only \$49.95 plus \$4.91.

Deluxe SET and FORGET version allows you to switch between CRC and PHANTOM sectors without having to readjust hardware module each time Only \$59.95 plus \$4.5/H

# Reviewed by Gregg Pearlman

A touch tablet emulates the precise finger control of pen/pencil/brush drawing much more accurately than a joystick or a mouse. And it keeps your hand in a more comfortable position than a light pen. These factors make a touch tablet the best tool for drawing computer pictures.

Unfortunately, KoalaPads for Atari and Atari's own touch tablets are no longer being made. For about two years, anybody wanting to find a touch tablet for an 8-bit Atari needed to search for hard-to-find remainder stockpiles.

But now the **Animation Station** is here to fill this graphics gap. Actually this powerful, versatile touch tablet from Suncom has been available for awhile, but the company never got around to announcing it to the Atari

community.

The sturdy Animation Station plugs into joystick port 1. Its work surface is about the same size as the one on the Atari Touch Tablet—about 50% larger than the KoalaPad's. And it boasts two sets of DO and UNDO buttons, a great help to left-handed artists. The stylus stores away in a small hole at the upper right-hand corner, but it falls out easily and is not attached to the tablet.

A vital factor in the usefulness of any touch tablet is the graphics software that comes with it—as well as the other software it's compatible with. As we soon discovered, the Animation Station's **DesignLab** paint program is actually *Blazing Paddles* which earned a good review in **Antic**, January 1987. The only difference we could find is that DesignLab doesn't accept input from a joystick or light pen. (However, **Antic**'s copy of Blazing Paddles never worked with a light pen either.)

Like Blazing Paddles, DesignLab software works with the KoalaPad but not with the Atari Touch Tablet—up and down are reversed. However, KoalaPad's Micro Illustrator software will run on the Animation Station tablet.

As we said in our Blazing Paddles review, this software is comparable to continued on next page

# **Product Reviews**

the well-established Micro Illustrator. But it has a few quirks, which may or may not be important to you. Blazing Paddles/DesignLab uses only one disk drive, you must go to a separate screen to change colors, and picture files *must* have .PIC extenders.

DesignLab loads and saves pictures only in 62-sector Micro-Painter format. This means Micro Illustrator pictures must be converted to Micro-Painter format with a utility such as the *Rapid Graphics Converter* (Antic, November 1985). Make sure to give each picture file that .PIC extender.

To get the feel of the program, you might want to "click" on SKETCH and start drawing free-hand. To change your four-color palette, click on COLOR. Select hues and luminances for your background and three playfield colors. The chosen

colors, combined with six patterns, make up 96 Mix Patterns.

Now press a DO button, choose one of eight brushes, click on SKETCH and draw by holding down a DO button while moving the stylus on the tablet.

Other functions, such as BOX, OVAL and LINE(S) are much as they'd be in other drawing programs. The SPRAY feature operates just like SKETCH, but it lets you "spray" several pixels of color onto the screen to soften the hard edges.

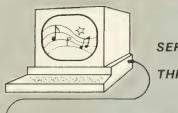

DesignLab's "shape tables" include buildings, animals, weapons and cars. These can be flipped or rotated and placed in your picture. The three default text sizes are normal (like Graphics 0 uppercase), double-width ("Graphics 1," upper/lowercase) and double-width, double-height ("Graphics 2"). You can also add italic,

bold or script character sets. But the manual doesn't suggest a way to add custom sets.

The ZOOM function is easy to use and, unlike the Magnify function in Micro Illustrator, you'll know exactly where you are in your picture. However, ZOOM only lets you place one pixel at a time—you can't FILL, SPRAY or even SKETCH.

The SCROLL feature lets you wrap the screen horizontally or vertically. In other words, you can center your picture, then save it—and it'll be centered when you reload it.

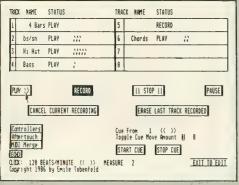

You can print your pictures on graphics-capable Epson printers, as well as Star/Gemini, Panasonic and Okidata Okimate printers. The 30-page manual has plenty of illustrations but skimps on some details. However, experimentation should tell you all you need to know.

SERIOUS SOFTWARE FOR THE THINKING MUSICIAN

220 Boylston Street, Suite 306 • Chestnut Hill, MA 02167 • (617) 244-6954

# MIDI RECORDING STUDIO V 1.1

"...the most musically powerful sequencer currently available for the home/hobbyist ST MIDI market. Not only that, but it is also the least expensive... I strongly recommend MRS as the best Atari ST sequencer for home or hobbyist use. It is easier to use and offers more features than other programs costing three or four times as much."

Jim Pierson-Perry Antic Sept '87

8 Tracks
Punch IN/OUT
(record with CUE)
Access to internal ST voices
FULL Hi-Lite event editing
Compatible with KCS and Copyist

Call or write for free brochure.

Overall, the Animation Station graphics tablet with DesignLab software is a good package that makes a worthy replacement for the unavailable KoalaPad and Atari Touch Tablet. If you're looking for a touch tablet, you won't be disappointed in this one.

# MONEY \$PIN

Ordinarily, I'm no big fan of computer games. But this inexpensive little gem from White Bag Software is a welcome exception. It's challenging and holds my interest.

Money pin is based on the popular TV game "Wheel of Fortune," but it uses a "one-armed bandit" as its motif instead of a carnival wheel. Up to four can play. There are two general categories and one each for history and sports, as well as a "hard" category—which is hard.

Each category has four subtopics: things, phrases, persons or titles. Select a consonant. If you guess correctly, the letter is displayed in the row of boxes—just like "Wheel of Fortune," only there's no Vanna White.

If you have enough money to buy vowels, buy E's first—they're the most common. The dollar amount is selected by the one-armed bandit instead of a wheel. You can keep buying vowels or spin again. If you think you know the answer, you can guess. However, you *should* go for as many

letters as possible to build up your winnings—but it's very easy to blow it all on a bad spin. After four rounds are over, you can return to the menu, spin some more or load a new file and start again.

You can create your own data files or just use the ones provided. I recommend using the game disk's data files for a while before building your own.

You must use your own disks for creating data files, because the program only looks for certain filenames. If you put your new files on the game disk, you'll wipe out the original files. It's basically a straightforward process and the manual tells you what you need to know.

If you are looking for inexpensive, interesting software for your 8-bit Atari, I highly recommend Money-\$pin.

# STEREOTEK TO GLASSES—

STEREOTEK
GLASSES—
true stereoscopic
3D graphics for
your Atari ST.

Put on the STEREOTEK glasses and jump into a new universe. Discover a magical world that you always knew existed. That extra dimension—DEPTH. Now you can add depth to your computer graphics with the STEREOTEK Liquid Crystal glasses. Solid, realistic, 3D images you want to reach out and touch. STEREOTEK glasses plug into your ATARI ST cartridge port to provide absolutely realistic 3D graphics in full color or hi-res monochrome.

Your STEREOTEK depth-view system includes:

- One pair electronic Liquid Crystal Shutter glasses with four-foot cable (can be comfortably worn over eyeglasses).
  - ST cartridge interface unit supports two sets of glasses (second set optional).
  - DEGAS Elite Stereo Desk
    Accessory.
  - Stereo CAD-3D animation and stereo slide show by Tom Hudson.
  - For programmers: Complete developer's instructions plus source code for adding stereo to your own programs.

SIEREO TO THE DIMENSIONAL GLASSES

The secret to full-color stereo images on a computer screen is electronic Liquid Crystal Shutter (LCS) glasses. Two optical shutters in eyeglass frames are connected electronically to the ST. Everytime the ST screen refreshes (60hz/color, 70hz/mono), one shutter closes and the other opens. The monitor displays

views synchronized with the shutters. The alternating views appear faster than the eye can see, and your brain translates the normally flat monitor image into one of startlingly realistic depth. Because of the ST's speed, RAM size and cartridge port, this advanced graphics technology is only available on the Atari ST. (One megabyte RAM recommended).

alternating right and len eye

# STAR SOFT GAMES

(entertainment software) TDC Distributors Inc. 3331 Bartlett Boulevard Orlando, FL 32811 (305) 423-1987 \$6.99-15.99, 48K disk CIRCLE 198 ON READER SERVICE CARD

State-of-the-art graphics in vivid colors is the hallmark of Star Soft's new, inexpensive line of 8-bit games, including **Pirates of the Barbary Coast** and **Aliants** (\$17.99 each), as well as **Sprong** and **Space Lobster** (\$9.99 each) and **Disk 50**, a 50-game anthology for \$6.99.

# LODE RUNNER, KARETEKA

(entertainment software) Broderbund Software, Inc. 17 Paul Drive San Rafael, CA 94903-2021 (415) 492-3200 \$14.95 each, 48K disk CIRCLE 204 ON READER SERVICE CARD

The games aren't new, but the \$14.95 price is. **Lode Runner** and **Karateka** are two of the many classic titles that Broderbund is discounting to between \$14.95 and \$29.95. These are the first titles available for the 8-bit Atari.

# SMART SPEAKER

(speech synthesizer) Swisscomp Inc. 5312-56th Commerce Park Blvd. Tampa, FL 33610 (813) 628-0906 \$229.95

CIRCLE 200 ON READER SERVICE CARD

The Smart Speaker, a text-to-speech converter, connects to any computer having a standard parallel or serial port. It works with any software that puts out ASCII text to drive a printer. The Smart Speaker converts ASCII text to speech and speaks it out accurately through its built-in speaker. No special software is needed, and the program accepts data in formats that printers accept. The package includes a parallel cable ready to connect to your existing printer, and you can use the Smart Speaker to drive an external amplifier, VCR, audio tape recorder, phone answering machine, etc.

# GUILD OF THIEVES

(graphic game)
Firebird
P.O. Box 49
Ramsey, NJ 07446
(201) 920-7527
\$39.95, 48K disk

You're back in the mythical kingdom of Kerovnia in **The Guild of Thieves**, the long-awaited sequel to the ST hit **The Pawn**. This new 8-bit title combines witty dialogue, challenging puzzles and outstanding graphics. The package also contains a humorous 40-page novella, a Bank of Kerovnia credit card, an Indenture and Contract of Service certificate, dice, play guide and other goodies.

# **BORODINO: 1812**

(strategy wargame) KRENtek Software 5401 N. 10th, Suite 214 McAllen, TX 78504 (512) 682-9598 \$59.95, 48K CIRCLE 205 ON READER SERVICE CARD

The 70,000-casualty battle that inspired the "1812 Overture" and triggered Napoleon's downfall gets a worthy treatment in **Borodino: 1812**. Subtitled "Napoleon in Russia," this new title from the makers of a popular "Waterloo" wargame features eight scenarios, one or two player options, joystick control and variable speed action including real-time. The full three-day battle, with over 150 units, normally takes over four hours. Or you can just play the 15-minute "Assault on Shevardino" episode.

# ACE OF ACES

(graphic game)
Accolade
20813 Stevens Creek Blvd.
Cupertino, CA 95014
(408) 446-5757
\$29.95, 64K disk
CIRCLE 196 ON READER SERVICE CARD

Experience the thrill and challenge of flying a British Royal Air Force mission over World War II Europe. Ace of Aces, Accolade's new interactive aerial combat simulator, offers lifelike graphics and animation inspired by missions flown in the remarkable RAF Mosquito. Ace of Aces features four different air battles, each requiring special weapons, flying and navigational skills.

"The most useful program for the Atari since Print Shop!"

# FORMS GENERATOR for the Atari 800, 800XL, 65XE, 130XE

Designed by Jeff Brenner, columnist for Computer Shopper magazine, of "Applying The Atari" fame, and author of book and magazine articles in COMPUTE!, ANALOG and others.

LOOK WHAT YOU CAN DO WITH FORMS GENERATOR: Purchase merchandise by mail? Next time, send a customized purchase order form! Does your home or business ever need statements, in-

voices, proposals, job work orders, gift certificates, etc.? No problem! Use FORMS GENERATOR's scrolling spreadsheetstyle screen to design almost any form to suit your exact needs. What you see on-screen is what you get on paper! Use the text mode with any 80-column printer, or the high-res graphics mode with the Epson, Gemini/Star, Okidata, Panasonic or Prowriter for remarkably realistic forms. BUT THAT'S JUST THE BEGINNING: Once you've designed a form, you can program FORMS GENERATOR to make all calculations automatically! Imagine: after you enter quantities, descriptions and prices, FORMS GENERATOR moves about the form calculating extended prices, subtotals, and even the sales taxl Like magic! (Sample invoices included). You can also use FORMS GENERATOR for record keeping, since you can save filled forms to disk!

Read what our customers have written: "Excellent ... easy to use and ran perfect(ly) ..." T.W. Wethersfield, Connecticut; "I was most impressed with your FORMS GENERATOR program ..." J.E. King, South Carolina; "Love it!" C.R. Cortland, Ohio. Our "down to planet Earth" price: Only \$23.95 (product #ATA611).

# REEVE Software presents software that will be a real winner with your 800/XL/XE computer!

# **NEWS STATION**

News Station gives you the power to create newspapers with your Atari computer quickly and easily. Powerful text entry commands (alternate fonts, 64 text sizes, text file compatibility...etc), and graphics commands (Import Print Shop icons, picture files, and draw freehand with keyboard, joystick, and Koala Pad) make News Station rank high with our customers. Take the drudgery out of creating documents with News Station. \$29.95

# PUBLISHING PRO

Object oriented desktop publishers have been available for other more expensive computers for years, but now Publishing Pro brings this power to your Atari computer. Layout columns, headers, and icons on an eighty column page all at once to quickly create one, two, or three column newspapers without much work. Automatic centering and compatibility with text files created by word processors are all standard with Publishing Pro. \$39.95

Also Available ...

News Station Companion

Adds a complete text file converter, Plate Manipulator for expanding and centering plates, Librarian, and a more powerful Koala Pad converter to News

Ditto XL \$34.95

Ditto XL is the most powerful backup software for your Atari XL/XE computer. It features a simple backup process, compaction utility, and lots of power to back up virtually any program available. Don't be lulled into buying other backup software and hardware that you will regret later...Ditto XL is the best!

# "Computing at night bit into my budget..."

# my budget...

# "With GEnie™ I get more bytes online for less."

\$10.00+ per hour

Most online information networks can drain your resources faster than you can say "Vampire." Not with GEnie, the General Electric Network for Information Exchange. As part of the world's largest commercially available teleprocessing network of General Electric Information Services Company, GEnie won't bite into your budget.

# Evenings, weekends, holidays. Just \$5 per hour.

With GEnie, you can make friends, schedule meetings, gather facts and figures, set up travel reservations, get the news, be entertained, even shop for a fraction of what other information services charge.

# And you get a lot more for your money.

With GEnie's Atari† RoundTable TM Special Interest Group you can discuss the latest in Atari products and accessories; download hundreds of public domain software programs, and participate in exciting and informative online conferences. And, uploads are FREE on GEnie!

### There's more!

Meet friends old and new with GEnie's *LiveWire* TM CB simulator or exchange messages with *electronic mail* service. Schedule a trip with the *online travel service*. Fun and learning for the whole family with *Grolier's* electronic encyclopedia.

Play multiplayer and classic games in GEnie's *Game Room.* Get the latest in domestic and international *computing news*. All this and there's more to come. New services are being

added each and every month!

# \$5 per hour

# Only \$18 to register! Save up to 60%!

Check out the chart. Compare the savings for yourself. You'll find GEnie delivers all of your favorite services for an incomparable price, at incomparable savings.

# **Game of the Month**

By Heidi Brumbaugh, Antic Junior Editor

# **Hot and Cold**

"Master Mind" challenge in 8-bit BASIC

Hot and Cold is an Atari 8-bit variation on the classic peg game recently revived as Master Mind. This compact BASIC program works on Atari 8-bit computers of any memory size, with disk or cassette.

ust about everybody has played Master Mind, or at least knows about this popular pegboard game of logical deduction. The game's concept is centuries old. It was played in old England as Cows and Bulls and more recently as Code-Breaker.

Antic published an ST version of Master Mind as *Deduction* in our December, 1986 issue. The October, 1983 Antic Game of the Month was Maxter Mind, which was written in assembly language. However, Hot and Cold is the first 8-bit Atari BASIC version of Master Mind ever published in Antic.

# **GETTING STARTED**

Type in Listing 1, HOTCOLD.BAS, check it with TYPO II and SAVE a copy before you RUN it.

Hot and Cold is programmed in Graphics 1, a five-color mode. That's not really enough different colors handle the complete color-guessing puzzles of the traditional pegboard Master Mind game. So instead of colors, this time your Atari will challenge you with random arragements of symbols.

Which four of these six symbols— \*, +,!, \$, # and >—has the computer chosen? And in what order are these symbols placed? You must figure out the correct pattern of symbols in 10 turns or less. And a symbol can be used more than once in each pattern, which makes matters even more difficult. Make your deduction by moving the joystick to highlight a symbol and then pressing the joystick button to select it. After your choice is displayed, the computer asks you to con-

firm it, which gives you an opportunity to change your mind.

After you select YES from the confirm menu at the right side of the screen, the computer will tell you how many symbols are "hot"—the correct symbol in the correct place—and how many are "warm"—the correct symbol in the wrong place.

This information appears in "W" and "H" columns at the right of your selected symbol patterns. Your remaining symbols are "cold"—so far off that they're not even displayed in a column. The trick is that the computer won't say *which* guesses are hot or warm. That's the part you must figure out logically.

For example, if the computer's pattern is +\*!> and you guess ++ \*#, you'll have a 1 in the H (hot) column for the + and a 1 in the W (warm) column for the \*. Notice that the corcontinued on page 32

All sales are final and returned shipments are subject to a restocking fee.

HOT AND COLD continued from page 29

rect + at the left is counted only in the H category and is not repeated under W.

Several different strategies can be used to win Hot and Cold. One is to eliminate symbols in order to make the clues clearer. In the example above, your next guess might be ###. You would have a zero in both columns, telling you there are no pound signs in the answer. Guessing ++++ would tell you that one (and only one) of the plus signs in your first guess was correct—but you still couldn't be sure whether or not it was in the right place.

Another less scientific approach is to make a few random guesses so you will have lots of information to rely on. Your guesses remain on the screen throughout the game, so the real challenge of the game is to make new selections based on the hints given in previous turns.

If you don't guess the pattern in 10 turns, the computer will display the correct sequence and ask if you want to play again.

# **ABOUT THE PROGRAM**

The code for Hot and Cold is short and straightforward. After initializing the program variables, the computer randomly selects its four symbols. It prints the game board, sets up the selection menu and then monitors the joystick to get the four symbols that make up the player's guess. If the player confirms the choices, the computer evaluates the sequence by checking each symbol in the correct sequence against each symbol in the player's guess.

Play continues until you figure out the sequence, or until all 10 turns are used up.

Heidi Brumbaugh wrote Red, White and Blue, Antic's July, 1987 game of the month.

# Critical-Path Project Manager

Streamline your personal projects like the pros

by DAVID SCHWENER

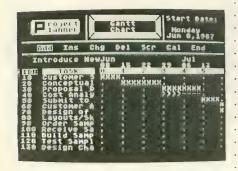

Use advanced business techniques to plan any of your own personal projects for greatest efficiency, prioritizing tasks and managing time most effectively. Critical Path Project Manager uses the breakthrough concepts developed for major corporations. And it displays or prints easy-to-understand work analysis charts that will help keep your project moving towards successful completion. This elegantly written BASIC program works with Atari 8-bit computers with at least 48K memory and a disk drive.

As far as I know, Critical Path Project Manager is the first professional task-scheduling program for Atari computers. With advanced professional-level evaluation techniques and a graphic display of project information, Project Planner helps manage even the most complex projects efficiently.

But even if you don't need Project Manager to help you run your own business or job, this software can be used for any activity, from club picnics to weddings to your next programming effort.

A project consists of several tasks that must be completed to meet the continued on next page

final goal. Each task has its own name, length and relationship to the other tasks. The core of the Project Manager program is the Critical Path Method (CPM), which is widely used by large corporations to evaluate task relationships. Because some tasks cannot begin until others are done, a *path*, or series of related tasks, is formed.

The *critical path* of a project is the longest series of tasks which *must* be done on time to finish the project before the deadline. Other tasks are considered non-critical, since their start and finish can be delayed without affecting the final date. The maximum delay is called *slack time*. These tasks are then displayed on a "Gantt Chart," which shows both critical and non-critical tasks.

# PLANNING A PROJECT

- 1. Define the *objective* and *start date* of the project.
- 2. List each task required to complete the objective.
- 3. List each task's *duration*. Also, decide if it must wait for other tasks to finish before it can start. A task that must be finished before another task can begin is called a *predecessor*.
- 4. Enter the data according to the following instructions, and view the Gantt chart. Look at the date of the final task to see when the project will be completed.

# **USING THE PROGRAM**

Type in Listing 1, PROJPLNR.BAS, check it with TYPO II and SAVE a copy before you RUN it.

When you type a number or letter for menu selections, the characters do not appear onscreen and you don't have to press [RETURN]. However, when you type information for the program, these characters do appear onscreen and you must press [RETURN] to signal that you're done with a specific entry.

David Schwener, a product engineer from Fayetteville, North Carolina, divides his computer time evenly between programming and business applications. This is his first publication in Antic. Pressing [ESCAPE] lets you exit, unless there's a specific menu selection for doing so. Also, if the border color is *not* black, or if there's a message indicating calculations in progress, user input is temporarily blocked.

# **MAIN MENU CHOICES**

LOAD/SAVE A PROJECT: At the prompts, enter the drive number, then the filename with *no extender*. The directory only shows files with the .PRJ extender.

PROJECT INFORMATION: To select one of the following options, highlight it with the [LEFT ARROW] and [RIGHT ARROW], then press [RETURN].

PNAME: The Project Name can be 25 characters long and should adequately describe the project as a whole.

START: The start date (mm/dd/yy) of the first task of the project. Warning: the program will not check for the validity of a date (for example, 02/31/88), so be accurate.

SCALE: This refers to the unit length of one duration—hours, days, weeks, months, etc. Change the scale based on the project length.

WDAYS: Valid only in the Day scale, Workdays lets you exclude weekends and holidays.

GANTT CHART: Selecting this option without first loading a data file or entering a start date sends you to Project Information, where you must enter a start date before continuing.

ADD: Enter an identification (ID) number and press [RETURN]. IDs are like line numbers in BASIC programs: always increment them in steps of five or 10 to allow later additions. Entering an existing ID generates an error. The task is added to the schedule based on the ID. If you use an ID higher than any other task, the new task will be added as the *last* task in the schedule. If tasks 10 and 20 exist, adding task 15 will go in between them. When adding a task, no predecessors are changed automatically.

### **WYSIWYG Cassette Jackets**

#### Say goodbye to cassette chaos

by CHET WALTERS

If you're like a lot of other folks today, you probably make back-up cassette copies of your LP record albums, CD albums or commercial tapes. It's wonderfully convenient to have your favorite music on cassettes you can use in the car or with a portable cassette player. Not to mention the creative satisfaction of being your own disk jockey and making up original cassette programs that present the music in exactly the order you want.

As your collection of cassettes grows, sooner or later you'll find yourself facing the familiar problem of trying to write all the songs and artists on those cramped cardboard cassette jackets. If you're like me, you smear what you wrote for Side A while you're struggling to pen Side B, or you discover that you haven't got enough room for all the information you want to include.

#### WHIZZY-WIG

WYSIWYG (the desktop publishing acronym for "what you see is what you get") produces—in any typeface you desire—great-looking cassette jackets that you cut out and insert into your cassette cases instead of the cardboard jackets that come with blank tapes.

The program utilizes the bit-map graphics capabilities of Epson or C. Itoh Prowriter printers and their compatibles (Star, Gemini, Seikosha, etc.).

#### **GETTING STARTED**

Type in Listing 1, WYSIWYG.BAS, check it with TYPO II and SAVE a

Chet Walters, the owner and general manager of Non-Standard Magic, is the author of Words are Fun (Antic Disk Bonus, May 1987) and Lister Plus/Picture Plus (\$19.95, The Catalog, APO179). copy before you RUN it.

If you have trouble typing the special characters in lines 5000-5050, don't type them in. Listing 2 will create them for you. Type in Listing 2, check it with TYPO II and SAVE a copy. When RUN, Listing 2 creates these hard-to-type lines, and stores them in a disk file called D:LINES.LST.

To merge the two programs, LOAD "D:WYSIWYG.BAS" then ENTER "D:LINES.LST". Just remember to SAVE the completed program before you RUN it. You can then DELETE Listing 2 and LINES.LST from your disk to give you more room for font and jacket files.

#### **PRINTER CHOICES**

When you RUN the program, the first thing you're prompted to do is choose a printer. Since WYSIWYG's ultimate goal is a nice printout, we must be sure that the program works with your own printer. If you have an Epson-compatible (Star, Gemini, Seikosha, etc.) or a Prowriter-compatible, just press the corresponding number key.

WYSIWYG can also be made to work with almost any printer that has graphics capability. You simply add the necessary information to the printer list according to the instructions given in the REM statements that appear in lines 2042-2046 of Listing 1.

Since the program was designed around an Epson printer, the best results are obtained with printers capable of producing bit-mapped graphics at 120 DPI (dots per inch) horizontally and 72 DPI vertically. Since vertical resolution is standard on most printers (each pin is 1/72 inch apart) just enter the data that will set your printer to issue eight-dot line feeds. (That's 1/9 of an inch.)

continued on next page

Print neat, readable jacket
directories for all your audio
cassettes in any typeface you
like. WYSIWYG Cassette
Jackets is a BASIC program
that works on 8-bit Atari computers with at least 32K memory and a disk drive. The program should work with most
graphics-capable dot matrix
printers.

For horizontal resolution, set your printer for 120 DPI (or 960 dots per 8-inch line—sometimes called high-resolution graphics) and tell it to expect 480 dots. What we're after is a jacket that is four inches wide and 4 1/8 inches long to match the cardboard jackets of standard cassette cases. If your printer cannot produce exactly 120 DPI, set it to print at the nearest resolution *greater* than 120 DPI and clip your jackets a little wide so that they're eight inches from side to side.

Now tell WYSIWYG whether the most significant bit (MSB) or least significant bit (LSB) will "fire" the TOP-WIRE of your printer. The last number in your printer's DATA statement must be this value—either 1 or 128—and it must appear as a *negative* number to signify that WYSIWYG should stop reading DATA and move on. If your printouts have the text upside down, you've entered the wrong value here.

#### **MAIN MENU**

From the main menu you can CRE-ATE a new jacket, EDIT, SAVE, or PRINT a jacket currently in memory. The [E], [S] and [P] keys won't work unless there is a jacket in memory. You can also LOAD a jacket previously saved; or load a custom FONT for printing and editing. Since this is your first time RUNning the program, your only options are CREATE and FONT.

#### **CUSTOM FONTS**

When WYSIWYG loads, it moves the Atari ROM character set to its own RAM area to use for display and printing. You can replace this RAM font with any nine-sector FONT file created with a font editor such as Envision (\$19.95, The Catalog, AP0185). If you have a disk full of these fonts, you'll likely want to press [F] to load a font right now.

At the filename prompt you can get a disk directory by pressing a drive number and [RETURN]. Go to the menu simply by pressing [RETURN], or enter the "Dn:filename.ext" of your font file and press [RETURN]. (The n is necessary only if you're using a drive other than D1:.) If you

choose the latter, your font file will load and be shown.

Caution: you *must* load a legitimate font file. WYSIWYG gets its personality by using the character set in its RAM area for display as well as printing. If you inadvertantly load a file that turns the display to garbage, press [CONTROL] [.] while at the main menu to reinstall the Atari ROM set into RAM. Then reload the correct font file. But be warned: [CONTROL] [.] will wipe any custom font you've loaded, so don't use this key wantonly.

#### CREATE AND EDIT

Since you have no jacket file as yet, press [C] for CREATE. WYSIWYG will wipe the jacket form clean and turn you over to the editor. What you see now is an accurate representation of Side A, or the *left* side of your cassette jacket. To the right of that is a minimenu displaying the editing features available and which side of the jacket you're editing.

Jacket lines 1-20 represent what will show through the clear plastic of the cassette case, where most of your songs will be listed. At the bottom, between two heavy lines, is the title area, which you see at the narrow end of the cassette case once the jacket is clipped and folded. Press [CONTROL] [E] to go to the bottom of the form and you'll see jacket lines 21-27, which appear on the back of the cassette case.

Side A now has a form 27 lines long by 25 characters wide to hold your song list, plus two lines for the title. Press [CONTROL] [S] to see a matching form for Side B, which goes on the *right* side of your jacket. [CONTROL] [S] flips between the two.

Since [CONTROL] keys are reserved for the commands illustrated at the right, only standard ASCII characters (numbers, uppercase or lowercase letters and punctuation symbols) can be used as text. [CONTROL] [C] centers the text on the line in which the cursor appears, and then it moves the cursor to the next line. If there are any leading spaces, the text will not center properly. However, text can be blocked right by "center-

ing" it repeatedly.

[CONTROL] [F] switches the display font between your custom font and the Atari ROM font, but will harm neither of them. If you haven't loaded a custom font, [CONTROL] [F] won't work. [CONTROL] [D] toggles your Dolby noise reduction selection through None, B, C or Hxp. [CONTROL] [B] toggles the Bias—NOrmal, CrO2 or Mélal. These can be set individually for each side and they appear nicely formatted at the top of your printed jacket.

All of the normal features of the Atari screen editor are supported by the WYSIWYG editor, except that [SHIFT] [CLEAR] erases only one line. To clear an entire side, press [CONTROL] [T] to get to the Top Of Form (TOF), then hold down [SHIFT] while alternately pressing [CLEAR] and [RETURN] until you're satisfied.

[CONTROL] [INSERT] and [CONTROL] [DELETE] work normally, but only on the line in which the cursor appears. [SHIFT] [INSERT]ing a line scrolls the last line off the end of the form. Any text pushed off of the form with these editing keys will be lost and gone forever. [SHIFT] [INSERT] and [SHIFT] [DELETE] will not work when the cursor is between the two title lines.

Type your song titles and side titles in the appropriate places on each side of the form, and then press [ESCAPE] to exit to the main menu. Once there, pressing [E] returns you to the editor on the side you came from.

#### LOADING AND SAVING JACKETS

When loading or saving a jacket, enter the filename, but *do not* include an extender on your filename. WYSI-WYG appends . JKT to SAVEd filenames, thus denoting them as jacket files, and looks for this extender when loading jackets. Only . JKT files can be loaded, and if you try to load a file that is not legitimate, WYSIWYG returns to the menu while retaining the pristine quality of the current jacket in memory. Jacket files are 21 sectors long, so you can fit several on a disk. The program can't delete jacket

continued on page 42

### **Your Best Route**

#### Trip planner saves \$\$\$

by JEFFREY SUMMERS, M.D.

John and Mary Smith of Honolulu are planning a trip to the mainland. They want to see the Grand Canyon, Yellowstone National Park, the Grand Tetons, the Air Force Academy, San Francisco and Disneyland. Flights could land them near any of these locations, and then they will rent a car that charges by mileage. Where should they land and what route should they take to minimize expenses?

ABC Delivery Service has a regular route involving 10 stores and businesses around town. There is a morning pickup, then the parcels are sorted, and an afternoon delivery is planned for those customers that have packages. With gasoline prices increasing again, they want their drivers to use the shortest possible routes—which may change daily as different businesses receive packages from the service.

J.Q. Publique, with his Official Airline Guide confidently in hand, figures he can get anywhere in the country in a day, but he has trouble figuring out the least expensive route when he has to go to five different cities in five days, the order of which doesn't matter.

Your Best Route effortlessly solves a wide range of route-planning problems. Type in Listing 1, TRAVEL.BAS, check it with TYPO II and SAVE a copy before you RUN it.

When you first RUN the program, use option [1] to create a new table/map. In the following example, we'll make up a small table using only four locations. Up to 20 locations are allowed. Antic Disk Owners will find

Jeffrey Summers is a practicing internist in Rochester, NY. He teaches a BASIC class for the ACORN users group. Dr. Summers is the author of Decide (Antic, June 1986).

a larger map file covering major cities in the Western U.S., WEST.MAP, on this month's disk.

#### MAKE A TABLE

Each location name can have only eight characters, so type Buffalo, Cleve, Pitts and Columbus.

Now you'll see the first three columns of your table. The cursor is in the upper right-hand corner, almost like a spreadsheet. The locations appear along the side of the table and across the top. Move around the grid with the [ARROW] keys, filling in distances as you go. Once you start in a direction, you can either press [RETURN] to continue in that direction or another [ARROW] key to change direction. The table shows three columns at a time.

Now move to the first row (Buffalo), second column (Cleveland) and start entering distances until your table looks like this:

	Buffalo	Cleve	Pitts	Columbus
Buffalo	0	240	300	360
Cleve	240	0	240	120
Pitts	300	240	0	150
Columbus	360	120	150	0

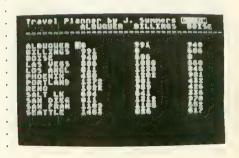

The R ON in inverse video at the upper right-hand corner of the screen means that the "reciprocal" function is on. Entries for distances in one direction are entered automatically into the opposite direction. Naturally, the distance between Buffalo and Cleveland is the same as the distance between Cleveland and Buffalo. Press [R] to turn off the reciprocal function. You can toggle this as much as you like while entering or editing a table.

After you're satisfied with the table, press [E] or [ESCAPE] to go back to the main menu. Now save the table with option [2]. Use the format D:FILENAME.EXT. Here, enter continued on page 44

Your Best Route helps you cut
down travel expenses by finding the shortest distance among
a cluster of destinations. This
BASIC program works on Atari
8-bit computers with minimum
48K memory and disk drive.

If you hate composing bibliographic references at the end of your school reports, Bibliography Writer is just what you need. Never again will you have to remember what to underline or what to put in quotation marks. This program takes care of all your bibliography punctuation and spacing. It even alphabetizes your source list when you're done. The program works with Atari 8-bit computers of any memory size, disk or cassette. It can be adjusted to work with just about any printer.

# **Bibliography Master**

#### Automate your term papers

by ALFRED FILSKOV III

Throughout your school career, you'll have to write numerous reports and term papers. Virtually all of these essays require a bibliography that lists your sources of information. Assembling a bibliography is a monotonous grind at best, forcing you to either memorize or continuously look up a series of arbitrary stylistic rules. But your Atari doesn't get bored by monotonous, rule-bound work. Just give it the right software commands and it'll crunch out whatever job you tell it to do.

With Bibliography Writer, now you just type the basic information for each source in your bibliography and the correct formatting is all done automatically. Source categories accepted by the program are books, encyclopedias, magazines, newspapers and interviews. Additional types of sources can be processed with the Compose Your Own option. After you complete your bibliography you can alphabetize it, save it, print out a paper copy, or even store it as an ASCII disk file for merging with the word processor file of your actual report.

The printing routines in Bibliography Writer are designed to work with Epson printers and compatibles such as Star and Gemini. But if you don't own an Epson-compatible printer, there are REM statements within the program that you should be able to use for creating any printer driver you need.

The codes to start and cancel underlining are defined in line 90 as [ESCAPE] [1] and [ESCAPE] [0]. If the codes for your printer are different, replace US\$ and UC\$ with the cor-

Alfred Filskov is the author of Appointment Calendar (Antic, January 1986) and V-Graph (November 1986).

rect codes. Also, to set the left and right margins, edit the values of LM and RM in line 550.

#### **GETTING STARTED**

Beat those bibliography blues! Type in Listing 1, BIBWRITE.BAS, check it with TYPO II and SAVE a copy before you RUN it.

When you RUN Bibliography Writer, you'll see the Main Menu. To enter your sources, go to the Entry Menu by pressing [B]. Here you'll choose the category of source you want to enter—and the program asks you for all the information it needs. When you are through entering the information, you will be returned to the Entry Menu. If you need to enter a source that is not on the Entry Menu, you can choose option [6] to compose your own new format.

After entering all your sources, you can alphabetize your list by first pressing [C] to go to the Edit Menu and then selecting option [3]. To print-preview your bibliography onscreen, press [A] to return to the Main Menu and then choose option [6]. If you see an incorrect source, you'll need to remember its number and go to the Edit Menu by pressing [C]. Then, choose [2] to delete the source and type the number of the incorrect source followed by a [RETURN]. You then must return to the Entry Menu and re-enter the source.

After your bibliography is correct, save it by pressing [2] on the Main Menu. Then you can print it out by choosing option [7]. Before the program prints your bibliography, it will ask you if you want to send your printer any special control codes, such as instructions to use the near letter quality character set. If you don't wish to send any special codes,

continued on page 44

# ANOTHER DULL DAY?

You could dust the bowling trophies, groom the dog, clean the gardening tools, go for a walk, floss, thaw some fish sticks, pay a few bills, or . . .

You could be thrust headlong into the most chilling and deadly of worlds—Alternate Reality.®

After being kidnapped by an alien spaceship, you stalk the streets of The City of Xebec's Demise, boldly wielding everything from Battle Hammers to Magical Flameswords. Become an awesome Warrior, mighty in strength and wealth, able to meet all challenges, preparing for the fateful day you enter The Dungeon.

Descend into the gloomy depths of The Dungeon, where Trolls, Ghouls, Dragons, and Devourers all vie to make you into a quick and crunchy snack! Where crossing a gorgeous Valkyrie could mean a grisly demise. Where you must conquer quest after life-threatening quest. Where you can choose to become good or evil!

... or make some tapioca, open a letter marked "occupant," floss (again), arrange your sock drawer . . .

Visit your retailer or call 800-245-4525 (In California call 800-562-1112) for ordering information.

#### CRITICAL-PATH continued from page 36

After entering an ID, press [N] to name the task. If the task must start on a specific date, press [S] and enter the "time line" number underneath the corresponding date. The time line number is in inverse video and is merely a reference number for that date.

Press [D] to enter the task's duration, which should relate to the scale selected. For example, if using the "week" scale, a task that takes 14 days should be entered as having a duration of 2. If you want to represent an *event* rather than a *task*, leave the duration at 0. Tasks with no duration are called "milestones" and are shown as asterisks on the Gantt chart.

If this task cannot start until other tasks are complete, press [P] for predecessors. Up to five predecessors (A-E) can be entered. To enter the first, press [A] and enter the ID of the preceding task. When all the predecessors have been added, press [RETURN]. When you're done, press [F] for finished.

INS: Insert is similar to Add, except that *predecessors are shifted automatically.* For example, if you insert task 15 between tasks 10 and 20, the predecessors for 15 will become whatever the predecessors for 20 were. Also, task 15 is added as a predecessor of task 20.

CHG: To change a task, you must enter an existing ID or else you'll get an error message. The CALC option may be required in order to see the change reflected on the Gantt Chart.

DEL: Again, an existing ID must be entered. The task information is displayed along with "Delete this task (Y/N)?". Pressing [Y] deletes the task. Pressing anything else will abort.

SCR: This option lets you view various parts of the Gantt Chart. Pressing [H] displays the upper left-hand corner of the schedule, beginning with the first task at the project start date. Pressing [L]eft, [R]ight, [U]p or [D]own lets you enter how far you want to move in that direction. The

move is based on the time scale. If you press [5] and the scale is days, you will move five days in the direction selected.

CAL: To allow faster data entry, calculation of the critical path is not automatic. If on the last line of the display the word CALC appears, the chart might not be pictorially correct. To view the correct Gantt Chart, select this option to calculate and display the new critical path.

REPORT WRITING: The Gantt Chart can be printed either in normal or condensed print (if your printer supports it). Place your printer's control codes for condensed print in line 4000.

#### PROGRAM TAKE-APART

Lines 20-310 calculate the critical path.

Lines 320-350 move screen 1 to screen 2 and lines 360-380 move screen 2 to screen 1.

Lines 390-410 are the GET key routine. Lines 420-480 get an alphanumeric string, lines 490-550 get a numeric string.

Lines 560-680 convert the standard date to Julian or vice versa.

Lines 690-760 draw a generic window. Lines 770-980 generate the main menu. Lines 990-1620 are the Load/Save Data routine.

Lines 1630-2320 are the Project Information routine. Lines 2330-3660 are the Gantt Chart routine Lines 3670-4100 are the Report Writing routine. Lines 4110-4230 calculate calendar information. Lines 4240-4820 print the Gantt Chart to the screen or printer.

Lines 4830-5260 contain the initialization routine and lines 5270-5290 display errors.

#### **PROGRAMMING NOTES**

Windows are achieved through the machine language routine MOVE, which moves the entire Graphics 0 screen from one address to another. When a window is needed, the screen is first copied to another location.

Then the window is printed to the screen using standard POSITION and PRINT statements, replacing the text "underneath" it. When the window is removed, the copied screen is moved back to the display area and the text is restored intact.

Another interesting technique occurs in line 4520. I wanted to fill a string with a pattern of characters. By slightly modifying the method of filling a string with a single character, I was able to fill MASK\$ with a pattern of periods and spaces in a single line.

Listing on page 65

WYSIWYG continued from page 38

files though, so you must do this through DOS.

Note: If you have a jacket in memory, even if it's blank, you must press [Y] at the WIPE CURRENT FORM prompt before you can LOAD or CREATE a new jacket.

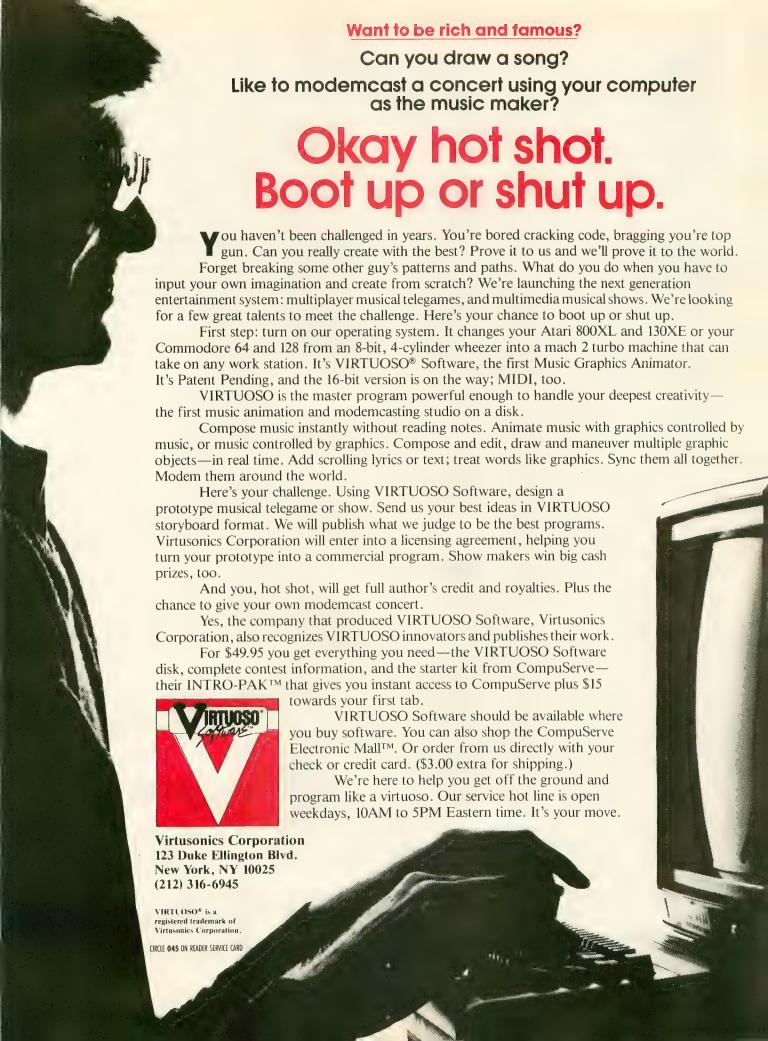

#### PRINTING A JACKET

Ahh. . . the ultimate purpose of WYSIWYG. Press [P] to print, and press [N] if you want to use the Atari ROM set instead of the current displayed font. (Pressing [N] won't harm your custom set.) Prepare your printer by making sure it's online and the paper is set to the top of a page. If you wish to stop printing, press [ESCAPE] at any time. Press any key to start again.

Your jacket is printed on the left side of the page, and two jackets will fit on a page. The printer starts printing exactly where your paper is set, but after printing a jacket, WYSIWYG issues one line feed, so you need not adjust your printer after printing only one. After the second jacket on a page, however, press the Form Feed button on your printer to move the paper to the top of the next page, or else the next jacket will print across the perforation.

Once you've printed your jackets, cut them with scissors, a paper cutter or, if you're like me, with a razor knife, straight-edge and cork board.

continued on page 44

#### WYSIWYG

continued from page 42

Cut your jacket on the heavy black line around the text, trimming about one dot from the outside for a clean looking edge. Prowriter users should trim about 1/8-inch beyond the lines at the sides, but trim as above on top and bottom. Other printer users should measure with a ruler for accurate centering. (Remember, Cassette Jackets are four inches wide and 4 1/8 inches long.)

Once cut, the jacket folds quite easily along the horizontal lines that surround the title, subsequently slipping into a cassette case very neatly. It might be a good idea to slip that cardboard jacket in behind the WYSIWYG jacket for a little added firmness.

#### **TECHNICAL TRICKS**

WYSIWYG tricks the ANTIC chip into thinking that E\$ (for EDITOR) is the screen memory area, which works well unless string E\$ happens to cross a 2K memory boundary.

Adding printers, modifying the program's overall length (by deleting REMs or adding features), or using WYSIWYG with BASICs other than Atari BASIC (Turbo, BASIC XL or XE, etc.) could affect the display of the editor, causing garbage to appear on the screen.

The routine beginning at line 9000 takes care of this problem very neatly. If E\$ crosses a 2K boundary, the routines in lines 9004-9005 check A\$ and B\$. All three strings are DIMensioned to 1300 bytes (see line 2010). Since A\$, B\$ and E\$ are DIMensioned consecutively, they will be placed side-by-side in memory. For example, if E\$ begins at memory location 20000, then A\$ must begin 1300 bytes later at location 21300, and B\$ at location 22600.

As these strings occupy nearly 4K of memory, there will *always* be a string which does not cross a 2K boundary. Once we find it, we alter the program's variable value table so that the string is re-assigned to E\$.

Atari Community we're all in it together

Using the above example, E\$ crosses a 2K boundary at location 20480, so we must use another string.

A\$, beginning at location 21300, also crosses a 2K boundary at location 22528, so we continue our search.

B\$, beginning at location 22600, does not cross a 2K boundary. This is the string we must use.

Your BASIC program automatically builds a variable value table to help it remember which string variables refer to which blocks of memory. (The ADR function uses this table to find the address of your string).

Knowing this, we can re-arrange the table, swapping the entries for E\$ and B\$. This swap occurs in lines 9032-9034. In this example:

ADR(B\$) = 22600 ADR(E\$) = 20000 before the swap

ADR(B\$) = 20000 ADR(E\$) = 22600 after the swap

Listing on page 70

YOUR BEST ROUTE continued from page 39

"D:EXAMPLE.MAP". If you need a directory for drive 1 before saving the table, press [RETURN] at the filename prompt. If there's an error, the screen turns red. The same procedure is used for loading a table with option [3].

#### **ROUTE CALC**

Now, starting in Buffalo, what's the shortest route for going to all the cities and returning to Buffalo? Option [5] plans the trip. The locations are listed and numbered. If the starting location could be any of the locations, as in the case of the Hawaiian travellers, press [0] at the prompt. In our example, we would type [1], then [RETURN].

You are then prompted for the final location. Again, if it doesn't matter where you end up, enter [0]; otherwise, enter the number of the final location. If you want the ending location to be the same as the starting

point, type [RETURN] at the ending location prompt.

The program now asks for the numbers of the locations you want to visit, followed by [RETURN]. When you've entered all locations, press [0], then [RETURN], to tell the program you're done. The screen turns yellow ("I'm thinking. . .") and the starting location is displayed.

The time needed to find the shortest path depends on the number of locations being examined. If you have six locations including a set start and finish, you'll see results fairly quickly. If you choose nine locations, go for coffee.

Built into the program, however, is another way to speed things up by 15% to 30%. Press the [SPACEBAR]. In a moment the screen will turn black and the computer can devote more power to running the program at top speed. You can turn the screen back on by repeating the process, but it's unnecessary. The program turns the screen back on after it has found the shortest path. If at any time you find an error in your table, you can edit the table with option [4], which puts you back into the "spreadsheet" mode used to enter the table.

So how does this help J.Q. Publique, who didn't care about distances, only about the fares (which seem to have little relationship to distance these days)? If you guessed that the program does not actually have to work with distances, but is just as good with dollar amounts (or any other numerical units you need to work with), give yourself a gold star.

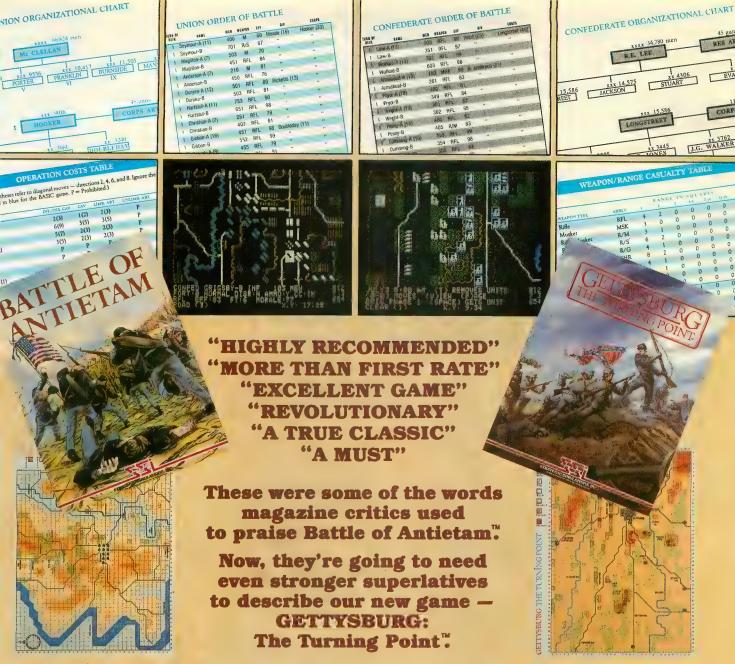

Listing on page 76

#### BIBLIOGRAPHY MASTER continued from page 40

just press [RETURN].

When printing out a bibliography, be sure to read the onscreen instructions. If you want to print it to a disk file, use option [8] on the Main Menu. This lets you load the bibliography directly into a DOS-compatible word processor such as AtariWriter Plus, PaperClip, or First XLEnt.

Listing on page 72

After the long months of hard work it took to create *Battle of Antietam*, we knew we had a very special winner on our hands. We're happy to see that the gaming public feels the same way:

"Battle of Antietam...marks a long awaited return by (SSI) to the Civil War. Let's just say it was worth the wait...Inside (the package) you'll find ...one of the most complete manuals to be found in computer gaming. And we do mean complete!...SSI and the authors have created more than a first rate grand tactical simulation....They have captured some of the look and 'feel' of Civil War combat, and it shows."

#### - Computer Gaming World, April 1986

"Battle of Antietam is a must for anyone with even a mild interest in the Civil War. The simulation is easier to understand than many others of its kind...it's more than just another game."

- COMPUTE!'s Gazette, June 1986

"Like all SSI games, Battle of Antietam has been meticulously researched and is a tactical game on a grand scale... SSI has produced dozens of computer war games, gathering praise from many sources. Battle of Antietam, however, may transcend previous efforts and become a true classic."

- COMPUTE! June 1986

"Battle of Antietam is highly recommended...highly absorbing and a superb presentation of one of the most historic battles of the Civil War."

#### - Computing Today! May 1986

Needless to say, we're pleased by this flood of compliments. But at SSI, we're our own harshest critics, which is one reason SSI continues to be the acknowledged leader in computer wargaming. We immediately set out to create another Civil War game that further raises the standard for strategy simulations. The proud result is GETTYSBURG: The Turning Point.

Advertisers have been accused of stretching their imagination to come up with incredible superlatives. Get ready to stretch yours after you've picked up a copy of these two games from your local computer/software or game store.

If there are no convenient stores near you, VISA & M/C card holders can order Battle of Antietam (\$49.95) and Gettysburg: The Turning Point (\$59.95) directly by calling toll-free 800-443-0100, x335. To order by mail, send your check to: STRATEGIC SIMULATIONS, INC., 1046 N. Rengstorff Ave., Mountain View, CA 94043. (California residents, add 7% sales tax.) Please specify computer format and add \$2.00 for shipping and handling.

All our games carry a "14-day satisfaction or your money back" guarantee.

The

# Laptop-to-Atari Connection

Handy file transfer to your 8-bit or ST

by CHARLES CHERRY

I love my Atari computers. And I love them most because they have changed forever the way I write. I could never go back to banging out draft after draft on my old Smith-Corona. Last year I formally acknowledged this fact when I gave away the typewriter to the Salvation Army.

But now that I am hooked on word processing, I am also hooked *to* the computer. Gone are the days of disappearing into a redwood grove to finish a report in solitude. No longer the romantic fantasy of being an author dressed in summer whites, sitting in a wicker chair on the lawn with a small typewriter on my knees.

Then I began to think, who needs a small typewriter. . .? I can get an inexpensive small computer! So that's what I did. I found a first-generation laptop computer being closed out for less than \$200. It's a member of the Radio Shack Model 100/NEC 8201A family.

This type of computer is not very powerful, but it supports a delightfully flexible writing environment. It's small enough to keep in the car, take to the library, or curl up with in an overstuffed chair. You can even bring a low-cost laptop to your favorite coffee house and write poetry on a full-size keyboard instead of paper napkins and old envelopes.

So my writing life became a lot sweeter—but it was still not perfect. My laptop's text editor is pretty primitive. It doesn't even have search and replace. And there's no printer

continued on page 48

photography by TIA DODGE

support at all, just an ASCII file dump. So if this laptop isn't a full-fledged word processing computer, what is it? Well, to me it's the perfect peripheral for any Atari—a portable terminal for either an 8-bit or an ST. (ANTIC ON-LINE has used a Radio Shack 100 since 1985 to transmit live reports from computer shows.—ANTIC ED)

My laptop is a very convenient tool for getting my first draft into digital form—sort of a memory dump for the brain. I go someplace that inspires me to work creatively and write a rough draft. Then I zap the text over to the Atari, where I rewrite, edit and generally massage it into shape. This works great for me, because rewriting takes the concentration and focus that my office can provide.

Zapping the text file to your Atari is easy. Almost all laptop computers have some kind of telecommunications capability and most of them (even the lower-priced models) have a built-in modem. This provides several possible ways to accomplish the file transfer—depending on which Atari computer you own.

#### **8-BIT CONSIDERATIONS**

There are a few extra factors you must keep in mind when uploading laptop files to an Atari 8-bit computer. That's because 8-bits don't have a built-in RS-232 port like the STs.

If you have a modem that plugs directly into your 8-bit, such as the Atari 1030 or XM301, you can use it with your laptop's built-in modem. But you'll be restricted to the speed of your slowest modem—probably 300 baud. Get a short cable with a modular telephone plug at each end. Connect the cable to your modem and to the modem jack on the laptop. Now you can follow the overall directions in the next section.

If you don't own a modem that plugs directly into your 8-bit, you'll need an interface module with an RS-232 adaptor, such as ICD's P:R: Connection or the Atari 850, before you can proceed to the instructions below.

There is one more adjustment 8-bit owners must make. These Ataris use a non-standard code for the carriage return and line feed (155 instead of 13 and 10). Your software adjusts to this with a parameter called Translation. Set your Translation for ASCII (sometimes called Light Translation) and the returns will be fixed automatically.

#### **NULL MODEM**

To transfer files between a laptop computer and your Atari, you need a suitable cable, some telecommunications software and either a modem or a "null modem."

Null modem connectors are two-way plugs that generally cost less than \$10. These devices switch the wires controlling data flow, which makes two computers think they're talking to modems instead of to each other. Several different wiring patterns qualify as RS-232 null modems. But if you have a choice, get the simplest null modem that'll do the job for your system. You can also get cables wired as null modems. These work just as well, but you can't also use them with real modems. (For more information about null modem connectors, see ST File Transfers with Kermit Antic, August 1985, page 25.—ANTIC ED)

My ST and my laptop both have standard DB-25 sockets, so I can use a null modem connector with a normal modem cable. Other laptops might need custom cables. Any Atari telecommunications software should work. Most laptops already have adequate file transfer programs built-in.

#### LAPTOP TO ATARI

Get started by connecting your portable to your Atari via modem cable and a null modem (or real modem). Turn on the telecommunications software of both computers. Now you'll need to set the software for both machines to the following:

8-bit word length 1 stop bit, no parity Half duplex XON/XOFF enabled Highest baud rate for both computers

(The highest baud rate both computers can handle is generally 9600 or 19200 baud, although some software may be limited to 2400 or even 300 baud.)

If one computer won't accept some of these parameters, set the other one as shown above and pray for luck. If you're unlucky, work your way through all the possibilities until you hit on one that succeeds. You'll know you got it right when something typed on either keyboard shows up unscrambled on both screens. Make sure the carriage returns come through correctly too.

If your modem software supports macros, save your successful configuration for future use. Otherwise, just write it down and keep the note handy.

Now set your Atari to receive a simple text file. Most programs call this CAPTURE or RECEIVE ASCII, but there are other variations. You do *not* want XMODEM, KERMIT, or any of the other protocols. Give your Atari a filename to save the text. Now the Atari will wait to receive the data.

Tell the laptop to send the file. The computers will handle the rest, so sit back and watch the text scroll across the Atari screen. When the file transfer is complete, be sure to save the file to disk before you continue..

All this sounds like a lot of work, but it's really easy and takes less time to do than to describe. The entire process will become automatic by time you complete your second or third file.

My laptop computer is the best purchase I've made since I got my original 8-bit Atari. It has made the hard work of writing so much more pleasant. For example, ths article was written on a sunny Saturday afternoon while watching the radio-controlled sailboats glide across Spreckels Lake in San Francisco's Golden Gate Park.

Charles Cherry, former product manager for The Catalog, has written many reviews for this magazine and is the 8-bit editor of the ABACUS users group newsletter in San Francisco.

GIVE ANTIC...AND SAVE 28%!

# GREAT GIFT LDEAL

# The easy way to please your favorite Atari user and yourself.

ANTIC is both fun and practical. A wonderful gift to find in the mailbox every month. And every gift subscription saves you money—over 28% off the regular price.

Now is the time to treat someone (and yourself?) to the ANTIC Action Edition with disk. What a pleasure for someone special. And just see how much you save!

You save time and energy too. Just send us your Gift List, and we'll take care of the rest. What could be easier?

For fast service on subscription orders: 800-234-7001 (6 am-6 pm PST, Monday-Friday).

We will mail you an attractive Gift card to announce each Gift subscription if we receive your order by the end of November. After December 1, we will send each Gift Announcement card, handsigned, direct to the recipient.

#### ALTERNATE REALITY: THE CITY (Version 2.0)

Datasoft 19808 Nordhoff Place Chatsworth, CA 91311-9969 (818) 886-5922 \$44.95

CIRCLE 265 ON READER SERVICE CARD

Reviewed by Jim Pierson-Perry

Alternate Reality is here at last for the ST! Originally previewed in the November, 1984 Antic, this is planned to be a seven-part series of interrelated role-playing fantasy adventure games. Each adventure will be a separate scenario with its own quests and puzzles but will tie into the overall plotline. Sort of like the old Saturday matinee cliff-hangers, isn't it?

The City is the first installment of the series and must be completed to go on to the succeeding disks. It is a training ground where you develop your alter ego character's personality, abilities, and equipment as well as learning basic survival skills.

You begin the game by creating your player character, who will continue throughout the series. There are six character traits which you can pick: stamina, charm, strength, intelligence, wisdom, and skill. Load up on strength at the start, since your bare hands will be your only

weapons. Your initial finances and hit points (measure of survivability) are also set at this time. As your character gains experience, these trait levels will increase and allow you more playing options as well as improve your combat skills.

The playing area is modeled after an enclosed city with over 4000 locations. Hidden behind its labyrinthine walls and secret passages are shops, inns, taverns, smithies, and banks. Here you can purchase equipment, get a job or invest in savings accounts. Hidden away more deeply are the various guilds where you can increase your character trait levels and be trained in the arts of magic. Mapping the city is vital to unravelling its secrets and a starting map guide is included in the game documentation. Be sure to purchase a compass early on in the game or you will quickly become hopelessly lost. In your travels you will find locations that you cannot enter without a future scenario disk (entrances to the dungeon, palace, arena, etc). Mark them well on your map—they will be important as the series progresses!

You will not be alone in your travels, since the city is heavily populated with both honest citizens and those who prefer to prey on the weak (e.g. you). Even worse are the nonhuman horrors who stalk the streets after dark, so beware the night until you gain some defenses! Unless you

really want to be a nasty soul, do not pick fights with commoners or merchants—the city guards will take an unfavorable viewpoint towards your continued existence!

When you encounter someone (or something) you have several options including attack, retreat, and cast a spell. Effective fighting requires different tactics for different foes. Fighting occurs in real-time so keep a finger near the pause key if it gets too intense.

Be prepared to die quickly and often until you get used to the game. Stay close to the town center and do not go out at night until you get a weapon (a dagger is good to start with). After you gain some experience and have over 25 hit points, you can try some exploring.

Alternate Reality's point-of-view graphics are outstanding. You see your surroundings from eye level in a realistic, detailed 3-D perspective that scrolls very smoothly with your movements. The realism even includes sunrise, sunset, and weather changes. There is a strong time dependency to the game and many play options can only occur during certain times. Simple movement can be done by mouse, joystick, and/or keyboard controls. However, some options (e.g. leaving a store) only work with the joystick or keyboard.

I do have a complaint: the game continued on next page

#### **ST Product Reviews**

save is the worst I've ever seen! When you save the game, you also are thrown out of the program and left to hang. It doesn't even return to the GEM desktop. Even more insidious, however, a given game save can be used only one time and is then erased. This lovely effect is not covered in the documentation and caused me to waste the benefits of several hours of game play. Adding insult to injury, the game save file apparently cannot be backed up by normal GEM functions; however, a simple sector copier will do the trick nicely.

Alternate Reality: The City is potentially an exciting addition to the ranks of ST gaming. By itself, The City is not so much a game as a playing shell; there is no purpose besides simply wandering around, killing things, mapping, and building up your character in preparation for quests yet to come. The success of the series remains with the disks yet to come (the next one, The Dungeon, is not slated for release until the end of 1987). However, a hint book should be available by the time you read this review.

#### LABELMASTER

Migraph, Inc. 720 333rd Street Federal Way, WA 98003 (206) 838-4677 S39.95

Reviewed by David Plotkin

LabelMaster (LM) is a combination address book database and label printer. It has the unique feature of printing labels with graphic pictures. It comes with over 100 pictures, has a built-in graphics editor for making your own pictures, and is compatible with PrintMaster files, meaning that there is a large library of ready-made graphics ready for use.

The first portion of LM is the database. Each record consists of fields for First Name, Last Name, Address, City,

State and ZIP. There is no phone number field. You fill in the information by typing it in the dialog box for each record. A variety of buttons also appear in the dialog box. You may print the record, delete it, move to another record, move to the first or last record, find the next occurrence of a specified string, or choose a new graphic design for the file. Two other boxes let you specify how many of this particular label will be printed, and to choose the personal or business format. Personal format prints the first and last name on the first line of the label, while the business format prints the first name on the first line and the last name on the second line. Thus, you can put the person's whole name in the first name field, and their company name in the last name field.

LM has many options once you have designed some records. You may print all the specified records as business or personal. You can sort the records on any field. You can also customize the text of a special label to be wide, normal, or condensed for each line individually. You cannot, however, print out already defined records using this special definition, but must fill in the information on the screen—and you cannot save this information.

The other half of LM is the graphics. Each label you print out can have a graphic icon, or small picture, printed on the left side. This can really dress up your labels, especially when you are sending out Christmas cards. When you print out a whole file of labels at once, they will all have the same graphic icon printed on each one. However, when you print out

single labels, you can choose which graphic design will be on each label. If you decide to load a design, you will be presented with a file selector box to choose the name of the graphics file you want to load. Each graphics file contains a number of icons. After you have loaded the file, a page of titles for the graphic icons in the file will be put on the screen. You may choose one of the titles by clicking on it or move to the next page or previous page of titles. Clicking on a title will load it and it will then be available for editing. This procedure is also how you load a design when you select "change design" in the database portion of the program. The design will appear magnified on the screen, and you can now change it. You select a pen color (black, white, or checkerboard) and click in the squares you want to color. You can also flip the design either horizontally or vertically, and invert it (white becomes black, black becomes white). You can move the design one line in any direction, print it, erase it, and either copy or move a user-defined block. Further, there are two modes for block operations, Replace (covers what was there before) and Transparent (moves or copies only the black dots from the original area to the new area, so the original design shows through). You may also draw lines of either one- or three-pixel width. When you are done with your design you give it a name and can save it with the file.

LabelMaster is a very simple program, but it does what it is supposed to do very well. The graphics editor could benefit from a few more tools (like a circle), and the database could use a phone number field, so that you could use the database as your address book, and not just for making labels. But all in all, this program is easy to use and fulfills a function I have yet to see anywhere else. If you enjoy making creative mailing labels, I recommend this program to you.

#### **ST New Products**

By Gregg Pearlman, Antic Assistant Editor

#### M/CADD

M/CADD is the first system to offer a complete, integrated solution from 3-D preliminary design through 2-D detail drawings. The program consists of two user-configurable packages, JIL-Comp and JIL-Mod, and lets you do 3-D wireframe modeling as well as 2-D drafting. JIL-Comp and JIL-Mod are linked through an associative database that lets you make the 3-D changes and have them reflected in 2-D.

CIRCLE **053** ON READER SERVICE CARD

#### **TEST DRIVE**

Experience the feel of driving several of the world's top sports cars, from a Ferrari Testarosa to a Lamborghini Countach to a Lotus Esprit Turbo. Each car's acceleration, braking, top speed, etc., is true to form. Test Drive displays the interior of the car and the road from the viewpoint of the driver-once inside, you'll see an actual rendition of the dashboard with an inset for the gearshift knob.

The object is to travel over different parts of the highway within a certain time limit. Periodically you'll check in, see how you're doing, get a map and head out again—if you're under your time limit. Standing in your way will be slow or oncoming traffic, falling rocks—and Smokey, of course. A speeding ticket means curtains, so drive carefully.

#### A ONE, AND A TWO

The ST version of Electronic Arts' Music Construction Set is now available for beginning and intermediate musicians. You can compose, play and print music. In fact, there are three different ways to enter notes: you can point to the desired note on the onscreen palette and click it into place on the score; you can click on the onscreen keyboard; or you can just play notes on a MIDI instrument connected to the ST. (Music Construction Set has MIDI In and MIDI Out features, as well as a "Jukebox" play mode and waveform editing, so you can create your own instruments.)

Complete music notation is at your fingertips: whole to thirty-second notes and rests, dotted notes, ties, triplets and quintuplets—add sharps, flats or naturals, or move the notes up or down an octave. You can use six time signatures and any key signature, transpose notes up or down, copy, cut-and-paste, and adjust tempo between 56 to 208 beats per minute, as well as printing sheet music on any STcompatible graphics printer. The Music Construction Set also plays three voices at once, chosen from 16 preprogrammed instruments.

\$39.95. Electronic Arts, 1820 Gateway Drive, San Mateo, CA 94404. (415) 571-7171. PRESS.

# Tap the Power of Your System Clock

Improve your timing with ST BASIC

A few weeks ago I wrote a set of benchmarks to test a variety of personal computers, including the ATARI ST. The benchmarks (integer math, real math, logarithmic and trigonometric functions, screen output speed and disk I/O speed) had to be written in BASIC, the language included free with every PC I tested.

As I was writing the benchmarks, the time came when I had to access the system clock from BASIC, and on my own ST, I found out that I couldn't. Well, after reading everything I could get my hands on about the system clock, I discovered that, although there seem to be two clocks running in the ST simultaneously, there is no way to *directly* access either one of them from ST BASIC.

Okay then, we'll do it in assembly language. This is the basic idea:

- write an assembly language routine to read the system clock, decode the time, and store it in memory
  - assemble the routine
- write a BASIC program, incorporating the machine language instructions (assembler output) to access the memory locations containing the time, read the time and display it.

And that's it. Sounds fairly easy, doesn't it? Well, it's not quite that easy, and here's why. GEMDOS offers two function calls to access the clock: \$2C (GET TIME) and \$2D (SET TIME). The GET TIME call requires no parameters, and returns the time in the low word of the 68000's data register **DO**. continued on next page

#### By STEPHEN ORIOLD

November 1987 55

Unfortunately, it's so well-encoded that it'll make your life miserable. This GEMDOS clock starts running immediately at start-up (whether you set it first or not), although it might not have the right time, using instead the time preset by ATARI. The GET TIME call returns the hour of the day, minutes and seconds. GEMDOS uses different calls ( \$2A, GET DATE and \$2B, SET DATE) to access the system date.

There are other ways to access the clock: through IKBD (intelligent keyboard) commands \$1B (Set clock) and \$1C (Read clock), or XBIOS calls 22 (settime) and 23 (gettime). Both the IKBD and the XBIOS call return both the date and the time of day. The IKBD call returns this information in packed BCD, in six bytes and a time of day event header. The XBIOS gettime call requires no parameters and returns the date and time, encoded, in a longword, with the time in the low order word.

I decided to use the GEMDOS call for my application. Let's take a closer look at this GEMDOS time. The GET TIME call returns the time in register D0, encoded in a special pattern of individual bits. Take a look at Figure 1 and you'll see what I mean.

The number of seconds is stored in bits 0-4 (five bits). Since the maximum number you can represent in five bits is 31, the GEMDOS clock runs in two-second increments. To get the correct number of seconds, the value stored in these five bits has to be multiplied by two.

The number of minutes is stored in bits 5-10 (six bits), the number of hours, in 24-hour format, in bits 11-15 (five bits). In the above example, the value of hours is 17 (5 pm), the value of minutes is 32, and the value of seconds is 8, translating to 16 seconds (17:32:16).

I wrote TIME.S, the assembly language source file in *Listing 1*, to read, decode and store the GEMDOS time. It was assembled using DRI'S AS68, on an upgraded one-megabyte 520ST.

Here is what this program is doing:

Line 1—save assembly language routine address in A1.

Line 2—push GEMDOS function call number on stack

Line 3—execute function call

Line 4—repair stack

Line 5—move time bit pattern to D1

Line 6—keep bits representing seconds, set everything else to zeroes

Line 7—multiply number of seconds by 2

Line 8—save bit pattern representing seconds in memory, in the first word immediately following the assembly language routine

Line 9—shift bit pattern 5 positions to the right, truncating bits representing seconds, shift zeroes into high-order bits

Line 10—move resulting bit pattern, representing minutes and hours into the second word in memory, following the assembly language routine

Line 11—keep bits representing minutes, set everything else to zeroes

Line 12—shift bit pattern 6 positions to the right, truncating bits representing minutes, shift zeroes into high order bits

Line 13—move resulting bit pattern, representing now only the number of hours, into the third available word in memory.

Line 14—return control to the program that issued the CALL.

That was the assembly language part. Now comes the BASIC program in *Listing 2*. This will create an integer array, consisting of the opcodes output by the assembler, found in the data statements. The 0th element of the array will contain the address of the machine language program, elements 21, 22 and 23 the seconds, minutes and hours. The program will read the address in element 0, then **CALL** the machine language routine, create a nice string containing the time data and output it.

If you intend to use this BASIC program as a subroutine in your own programs, move line 1040 to the initialization module of your own program, delete lines 1060-1080, 1320-1330 and all the REMarks, especially the one in line 1400.

This is not the only, probably not even the best way to access the system clock from ST BASIC. But it's simple, short, fast enough (for ST BASIC) and it can get the job done, until a better BASIC comes along.

#### **USING GFA BASIC**

Sometimes, you have to do radically different things to get the same job done in another version of the same language. Take, for example, GFA BASIC. Here, no machine language help is needed. GFA gives almost full access to the complete power of your Atari ST.

Examine *Listing 3*. This is the same program, written in GFA BASIC, but also show how to *set* the time and date as well as access them. Of course, getting the Time and Date from GFA is as easy as stating: **T\$=TIME\$**, or **D\$=DATE\$**. Actually *setting* the time, however, is a bit more involved. Let's investigate how this is done.

Get\_the\_date

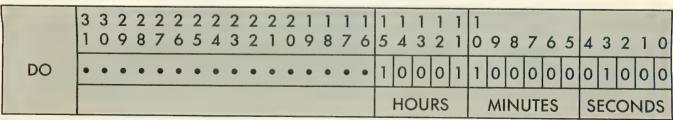

Figure 1

This routine first allows the user to type in the date in the typical format used in North America, MM/DD/YYYY. The interesting line here is:

Let Datein% = (Year \* 512) + (Month \* 32) + (Day).

After we've determined we have the proper numbers for the year, month and day we use multiplication to "leftshift" the bit-patterns for the date numbers into their proper positions, and then add them together into a single, four-byte long number, suitable for passing to the proper Gemdos() routine.

#### Handle\_d\_key

This procedure will collect keystrokes into the format of the date we want.

#### Get\_the\_time

The routine operates in essentially the same manner as the date routine. The proper digits are collected into a string, which is then taken apart to aquire the proper digits for passing to the Gemdos routine to set the time.

Finally, when the Time and Date have been grabbed and set, the programs returns to the top, where a small Alert Box is built up out of the current Time\$ and Date\$, and the results are reported. And that's all there is to it! I hope these simple BASIC routines can help you read your ST's internal clock, and that I've come to your aid—in time.

Listing on page 77

#### SAVE YOUR COPIES OF ANTIC

These custom-made titled cases and binders are ideal to protect your valuable copies from damage. They're designed to hold a year's issues constructed with reinforced board and covered with durable leather like material in maroon. Title hotstamped is gold. Cases are V-notched for easy access. binders have special spring mechanism to hold individual rods which easily snap in.

Cases: Binders: 1-\$7.95 1-\$9.95 3-\$21.95 3-\$27.95 6-\$39.95 6-\$52.95

# Lyco Computer

#### Marketing & Consultants

#### Lyco Means Total Service.

Mark "Mac" Bowser, Sales Manager

I would personally like to thank all of our past customers for helping to make Lyco Computer one of the largest mail order companies and a leader in the industry. Also, I would like to extend my personal invitation to all computer enthusiasts who have not experienced the services that we provide. Please call our trained sales staff at our toll-free number to inquire about our diverse product line and weekly specials.

First and foremost our philosophy is to keep abreast of the changing market so that we can provide you with not only factory-fresh merchandise but also the newest models offered by the manufacturers at the absolute best possible prices. We offer the widest selection of computer hardware, software and accessories.

Feel free to call Lyco if you want to know more about a particular item. I can't stress enough that our toll-free number is not just for orders. Many companies have a toll-free number for ordering, but if you just want to ask a question about a product, you have to make a toll call. Not at Lyco. Our trained sales staff is knowledgeable about all the products we stock and is happy to answer any questions you may have. We will do our best to make sure that the product you select will fit your application. We also have Saturday hours — one more reason to call us for all your computer needs.

Once you've placed your order with Lyco, we don't forget about you. Our friendly, professional customer service representatives will find answers to your questions about the status of an order, warranties, product availabili-

Lyco Computer stocks a multimillion dollar inventory of factory-fresh merchandise. Chances are we have exactly what you want right in our warehouse. And that means you'll get it fast. In fact, orders are normally shipped within 24 hours. Shipping on prepaid cash orders is free in the U.S., and there is no deposit required on C.O.D. orders. Air freight or UPS Blue/Red Label shipping is available, too. And all products carry the full manfacturers' vergrating. warranties

I can't see why anyone would shop anywhere else. Selection from our huge in-stock inventory, best price, service that can't be beat—we've got it all here at Lyco Computer.

TO ORDER, CALL TOLL-FREE: 1-800-233-8760 In PA: 1-717-494-1030 Hours: 9AM to 8PM, Mon. - Thurs. 9AM to 6PM, Friday — 10AM to 6PM, Saturday

For Customer Service, call 1-717-494-1670, 9AM to 5PM, Mon. - Fri. Or write: Lyco Computer, Inc. P.O. Box 5088, Jersey Shore, PA 17740

VISA

Risk-Free Policy: • full manufacturers' warranties • no sales lax outside PA
• pnces show 4% cash discount; add 4% for credit cards • APO, FPO,
infernational; add \$5 plus 3% for pronty • 4-week clearance on personal checks
• we check for credit card theit • compatability not guaranteed • return
authorization renuired • enocavauliability subject to change

PRICE GUARANTEE Since 1981, we have ted the industry by continuing to offer the lowest national prices white providing quality service. Many companies have come and gone frying to limitate our quality and service. If by some oversight we do not have the lowest prices advertised on the producte you desire, then we would appreciate the opportunity to rectify this oversight.

# MasterPlan Financial Spreadsheet

MasterPlan <sup>™</sup> is an inexpensive, powerful, easy to use spreadsheet written totally within Digital Research's "GEM" operating system. MasterPlan utilizes extensively the graphics and mouse capabilities of the ATARI ST personal computer. HELP is built right into the program. You will be able to create worksheets and graphs within minutes.

#### Atari ST™ Special Features.

Mouse or keystroke operation.

GEM interface with pull-down menus, icons, dialog boxes, ranging, scroll bars, column grabber, etc.

Sparse matrix for conserving memory.

Supports hard drives & printers supported by GEM.

Supports color or monochrome monitors.

Ultra-fast floating point math. Multiple windows for viewing graphs and worksheet at the same time.

#### Spreadsheet Features

Reads/Writes .WKS data files, so MasterPlan will work with both Lotus 1-2-3 or VIP Professional data files. Giant 8192 x 256 spreadsheet grid. Date, Financial, Logical, Mathematical, Special and Statistical Functions. Cell and range operations. Cell and range naming. Cell Pointer expansion. Automatic, manual & natural recalculation. Optional display of formulas in cells. Print formatting options include printing borders, margin control, headers & footers, automatic pagination. Separately formattable windows. Frozen titles horizontally, vertically or both. Copy or move cell or range contents. Delete or insert rows or columns. Undo editing command. Protection of all or portions of the worksheet. Change column-width globally or with mouse. Import data from other business programs.

#### Graph Features

Line, bar, stacked-bar, pie, and scatter graphs. "Exploded" pie graph. "UNDO" toggle graph. Displayable in color or monochrome. Up to six separate data ranges. Four different graph titles. Automatic or manual scaling. Symbols, line or data-labels for line graphs. Legends for labelling data ranges. Horizontal and/or vertical grids. Multiple graphs can be created and stored for each worksheet. Saves files compatible with DEGAS & Publishing Partner.

SYSTEM REQUIREMENT: Atari ST minimum 512K. 0.5 meg drive & color or monochrome monitor.

MasterPlan is a trademark of DITEK International; Atari and ST are trademarks of Atari Corp.; GEM is a trademark of Digital Research Inc.; Lotus and 1-2-3 are trademarks of Lotus Development Corp.

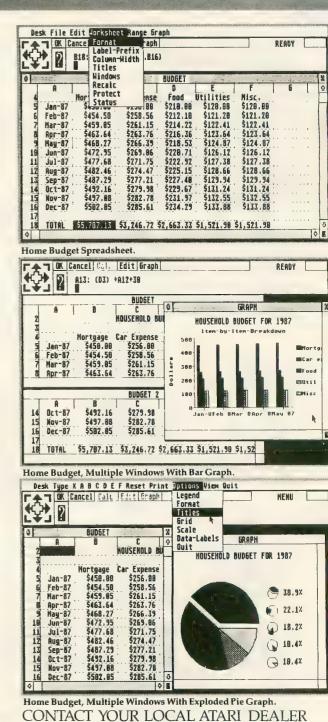

All specifications subject to change without notice.

#### A scaled-down version of VIP GEM with a whole new feel

By MATT G. LOVELESS

I tend to sort spreadsheets into three categories. There are the clumsy spreadsheets: those which are either too slow or too "vanilla" to bother with (I'd much rather punch away at my HP-41 calculator). Then there are the power-user spreadsheets: those which sport 3000 functions, a manual the size of a calculus textbook, and require a degree in Lotus to balance a checkbook. Finally, there are spreadsheets like **MasterPlan**: those which offer a delightful blend of simplicity, consistency and power.

MasterPlan is a scaled-down version of Ditek International's own VIP GEM (reviewed in the Fall 1987 issue of START). They took their successful Lotus 1-2-3 clone and trimmed off the fat. They removed macros, combined many of the more esoteric functions and streamlined the user-interface.

On the surface, MasterPlan looks a great deal like VIP GEM (see Figure 1). The screen layout is virtually identical and many of MasterPlan's features and operations will be familiar to VIP users. However, MasterPlan doesn't really feel like VIP GEM, and this is an improvement, since VIP GEM tries too hard to maintain much of the Lotus 1-2-3 structure and layout. MasterPlan, on the other hand, uses an entirely new (simplified) organization, allowing quick and easy access to the most frequently-used commands. One great improvement over VIP GEM: MasterPlan operates almost entirely within the GEM interface, utilizing dialog and file-selector boxes—the strange absence of GEM features in some of VIP's functions was one of my biggest complaints about the product.

However, the underlying guts of the program are essentially VIP GEM, which is also good. MasterPlan operates with a powerful and accurate math package, supporting all of VIP's functions and operators (hence, 1-2-3's also). These include a full array of financial, logical, trigonometric and statistical functions as well as date operations and lookup tables. As an added bonus, MasterPlan will read Lotus and VIP .WKS worksheet files (ignoring any macros).

Although MasterPlan is no speed demon when it comes to scrolling, moving around the spreadsheet is nonetheless quick and effortless (with either the keyboard or mouse) once you become skilled at using the scroll bars, tab buttons and express arrows. Also, you need do very little mode switching from mouse to keyboard—you can access nearly all of MasterPlan's functionality from either.

Range and cell specification is also simple. You can either select a range with the mouse or the keyboard and have it entered automatically into your formulas, or you

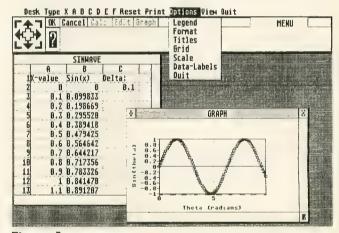

Figure 1

can merely type in the individual cell or range of cells manually. You can even label cell ranges and refer to them by name whenever you want to use them.

Like VIP GEM, you access MasterPlan's command structure through the GEM drop-down menus. If you make a selection that brings you into a sub-menu, the current menu bar is replaced with a new set of selections. In most cases, this is a straightforward operation. However, since all the menus look familiar, it's easy to get lost down one or two levels. To add to the confusion, the menus often change to reflect the widest range of options—sometimes

# Procopy ST BACKUP UTILITY

You can't backup your software because copy protection locks you out. **ProCopy** is the key!

- Protects against the accidental loss of expensive software
- Works with all Atari STs
- Copies both S/S & D/S disks
- Use with 1 or 2 disk drives
- Not copy protected
- FREE shipping and handling
- **TOLL-FREE** telephone number
- Updates are only \$12 with return
- Orders shipped same day
- Disk analyze function included

MasterCard and C.O.D. orders

CIRCLE 068 ON READER SERVICE CARD

removing some of the "roadsigns" that might otherwise indicate your location. However, this is only a minor complaint. After a day or two of use, you easily adapt to it. You can also branch through the menus with the keyboard. This is good for quick operations when you don't want to reach across the desk for the mouse. Unfortunately, one of the few bugs I found in the program inadvertently locks-out certain menu selections.

MasterPlan's graphing facility is virtually identical to VIP GEM's. MasterPlan supports bar charts, line graphs and pie graphs. Graphing data can be as simple as specifying a range and requesting a chart type. The chart appears in a GEM window which can then be moved around the screen and can be left open while you operate on the spreadsheet (see Figure 1). You can change the titles on the graph and graph up to six sets of data simultaneously. MasterPlan will also use the built-in ST screendump facility, or else save the graph as a DEGAS .PI2 or .PI3 (mediumres color or high-res monochrome).

MasterPlan's manual is a subset of the VIP GEM manual. However, it has gone through a major revision: the large but terse VIP tome has been scalpeled down (by nearly 100 pages) to a friendly and easy-to-read instruction manual. The paragraphs are smaller, the sentences shorter, the construction clearer. Overall, the manual is better organized and much easier to read. However, it still has some sore spots. At times the manual can be vague, using weak verbs and unidentified pronouns, and the writers have a nasty habit of renaming the keys on the ST keyboard—for example, the [Insert] key is called the [end] key and [Shift][Undo] becomes [break]. Strange.

MasterPlan is not copy-protected and comes on a singlesided diskette. The disk contains the MasterPlan program and a UTIL folder, both of which you can easily transplant to a hard disk. It will run in both color and monochrome, and it will operate with 512K or more memory. The manual comes laser-printed and spiral bound (it lies flat!). The only thing missing is a sampling of already created spreadsheets.

At \$129.95, MasterPlan may be a bit expensive, but there is a phrase that says, "benefits sell, not features." This product is loaded with benefits. Buy it.

TYPING SPECIAL ATARI CHARACTERS64
HOW TO USE TYPO II
<b>DISK SUBSCRIBERS:</b> Programs for 8-bit Atari computers can be used immediately. Just follow instructions in the accompanying magazine articles. ST Owners: See monthly disk's ST Help File for instructions on how to transfer programs to 3-1/2 inch disk.

DOS COMPATIBILITY: All 8-bit programs published by Antic are tested to work with Atari Disk Operating System (DOS) 2.0S and 2.5—not with the incompatible DOS 3.0. DOS 2.0S is available on each Antic Monthly Disk. Copy the DOS.SYS and DUP.SYS files. No part of this publication may be reproduced, stored in a retrieval system, or transmitted, in any form or by any means, electron-

ic, mechanical, photocopying, recording or otherwise, without the prior written permission of the publisher.

ANTIC SOFTWARE LIBRARY ★ 63

# TYPING SPECIAL ATARI CHARACTERS

Antic printed program listings leave a small space between each Atari Special Character for easier reading. Immediately below you will see the way Antic prints all the standard Atari letters and numbers, in upper and lower case, in normal and inverse video.

The Atari Special Characters and the keys you must type in order to get them are shown in the two boxes below.

NOR	MAL VIDI	EO
FOR TYPE	FOR THIS	TYPE THIS
TCTRL,	<b>⊞</b> C1	TRL S
CTRL A		TRL T
CTRL B	☐ CT	RL U
CTRL C	□ C1	TRL V
CTRL D		TRL W
CTRL E		TRL X
CTRL F		TRL Y
CTRL G		TRL Z
CTRL H		SC ESC
CTRL I		SC CTRL -
CTRL J		SC CTRL = SC CTRL +
CTRL L		SC CTRL *
CTRL M		TRL .
CTRL N	-	TRL ;
T CTRL O	-	HIFT =
CTRL P		SC SHIFT
CTRL Q		.EAR
E CTRL R		C DELETE
	LE ES	C TAB

	SE VIDEO
FOR TYPE THIS THIS	FOR TYPE THIS THIS
□ 小 CTRL ,	CTRL X
小CTRL A	CTRL Y
■小CTRL B ■小CTRL C	CTRL Z

小 CTRL I	ESC CTRL
N 小 CTRL J	TAB
■ 小 CTRL K	ESC ESC
■ 小 CTRL L ■ 小 CTRL M	SHIFT TAB
■ 水 CTRL M	□ 从CTRL .
■ 小 CTRL O	ACTRL;
☑ 小 CTRL P	■ ASHIFT = ■ ESC CTRL 2
■ 小 CTRL Q ■ 小 CTRL R	S ESC CIRL 2
♣ A CTRL S	CTRL
□ 小 CTRL T	DELETE  DESC
□ 水 CTRL U	CTRL
III 从 CTRL V 冒水 CTRL W	INSERT
N CIRL W	

Whenever the CONTROL key (CTRL on the 400/800) or SHIFT key is used, *hold it down* while you press the next key. Whenever the ESC key is pressed, *release* it before you type the next key.

Turn on inverse video by pressing the Reverse Video Mode Key  $\square$ . Turn it off by pressing it a second time. (On the 400/800, use the Atari Logo Key  $\bigwedge$  instead.)

Among the most common program typing mistakes are switching certain capital letters with their lower-case counterparts—you need to look especially carefully at P, X, O and 0 (zero).

Some of Atari Special Characters are not easy to tell apart from standard alpha-numeric characters. Usually the Special Characters will be boxed. Compare the two sets of characters below:

SPECIAL		S	STANDARD	
	CTRL F		/	
	CTRL G		SHIFT +	
	CTRL N		SHIFT -	
	CTRL R	- 📾	-	
	♣ CTRL S	+ 🖸	+	

# **HOW TO USE TYPO II (8-BIT)**

TYPO II automatically proofreads **Antic**'s type-in BASIC listings for 8-bit Atari computers. It finds the exact line where you made a program typing mistake.

Type in TYPO II and SAVE a copy to disk or cassette. Now type GOTO 32000. When you see the instruction on the screen, type in a single program line without the two-letter TYPO II code at the left of the line number. Press the [RETURN] key.

Your line will reappear at the bottom of the screen with a two-letter TYPO II code on the left. If this code is not exactly the same as the line code printed in the magazine, you mistyped something in that line.

To call back any line previously typed, type an asterisk [\*] followed (without in-between spaces) by the line number, then press [RETURN]. When the complete line appears at the top of the screen, press [RETURN] again. This is also the way you use TYPO II to proofread itself.

To LIST your program, press [BREAK] and type LIST. To return to TYPO II, type GOTO 32000.

To remove TYPO II from your program, type LIST "D:FILENAME",0,31999 [RETURN] (Cassette owners LIST "C:). Type NEW, then ENTER "D:FILENAME" [RETURN] (Cassette—ENTER "C:). Your program is now in memory without TYPO II and you can SAVE or LIST it to disk or cassette.

By Gregg Pearlman, Antic Assistant Editor

### FLASH BORDER

Pep up your BASIC text display by surrounding it with a flashy, moving border. This routine was sent to Antic by Agim Perolli of Boonton, NJ:

10 GRAPHICS 0:FOR P=1536 TO 1638:READ X:POKE P,X:NEXT P

20 DATA 162,0,189,0,224,157,0,120,189,0,225,157,0,121,189,0,226,157,0,122

30 DATA 189,0,227,157,0,123,232,224,255,208,227,162,120,142,244,2,104, 162,6,160

### XL MEMORY EATER

Want to watch your Atari 800XL eat memory? Type in:

10 IF PEEK(53279)<>7 THEN END

20 SAVE "D:JUNK.BAS"

30 SAVE "S:"

40 ? :? :? FRE(0)

50 RUN "D:JUNK.BAS"

This short program by Antic Technical Editor Charles Jackson demonstrates a little-known problem that readers regularly ask us about. The operating system (OS) built into XL computer models adds 16 "garbage" bytes to the end of your Atari BASIC program every time you SAVE it to disk or cassette.

When you RUN this program, it will SAVE itself to disk over and over again. Each time the program SAVEs itself, it displays the amount of available memory bytes. Notice that this value decreases by 16 each time around.

Line 30 lets you see these extra bytes for yourself. The SAVE "S:" command tells your Atari to SAVE your program to the S:-Screen device. In other words, the tokenized version of your program is displayed onscreen each time it is SAVEd. You can actually watch it grow and grow. Hold down any console key to stop the program.

This program will eventually fill your disk (and probably crash it, too). So you should RUN it on a "scratch" disk that doesn't contain other material you might want to keep.

If you're editing a standard BASIC program on an Atari XL, remember that 16 "garbage" bytes will be added to your program each time you SAVE it. But fortunately, you can remove these bytes from your program in four steps!

Here's the cure:

- 1. LIST your program to disk.
- 2. Type NEW.
- 3. ENTER your program back into the computer.
- 4. SAVE it back to disk. The "garbage" bytes have been removed.

### DOS CHECKUP

William Ho of Calgary, Alberta, Canada sent us this simple routine that lets you check which version of Atari DOS is active:

10 IF PEEK(1995)=170 THEN ?"DOS 2.0s" 20 IF PEEK(1995)=100 THEN ?"DOS 2.5" 30 IF PEEK(1995)=29 THEN ?"DOS 3.0"

And to check which version of Atari BASIC you have, type:

PRINT PEEK(43234)

VALUE RETURNED	BASIC
BY YOUR ATARI	VERSION
162	A
96	В
234	C

### ANOTHER XL RAMDISK

Here's bow to create a 101-sector RAMdisk while working in BASIC on your 800XL. This tip bas appeared in several users group newsletters, including the April, 1987 the Northwest Phoenix (Arizona) Atari Connection's Between Bytes.

This method is different from the January, 1987 RAMdisk Tech Tip which is written to your DOS 2.5 disk as an AUTORUN. SYS file. The following steps for this 101-sector RAMdisk must be repeated whenever you want to use it:

- 1. Boot your 800XL with a DOS 2.5 disk containing RAMDISK.COM.
- 2. Type POKE 1802, PEEK(1802)+128 and press [RETURN].
- 3. Type DOS and press [RETURN].
- 4. Press [L] and [RETURN]. Type RAMDISK.COM and press [RETURN].
- 5. Press the following: [1] [RETURN] [8] [RETURN] [Y] [RETURN].
- 6. Press the following: [H] [RETURN] [8] [RETURN] [Y] [RETURN].
- 7. Press [D] and [RETURN]. Type D8: DOS. SYS and presss [RETURN] [Y] [RETURN].
- 8. Press [B] and [RETURN].
- 9. Type POKE 5439,56 and press [RETURN].
- 10. Type DOS and press [RETURN].

You should now see the DOS menu almost instantly. You can store anything on drive 8 if (A.) it fits and (B.) you copy it to a regular disk before turning your computer off.

From the DOS menu, if you press [N] and [RE-TURN, MEM. SAV will be created on drive 8.

If you have a Tech Tip that you would like to share with other readers, send it along to Antic Tech Tips, 544 Second Street, San Francisco, CA 94107. You might get your name in print. We always welcome very short programs that demonstrate the Atari's powers, simple hardware modifications, or useful macros for popular software.

### HEXTABLE

This short program prints a handy one-page table of binary, hexadecimal and decimal numbers for instant conversion. It comes from Mark Brown's "Atari Small Miracles" column in the June, 1987 issue of Current Notes, the magazine of the Washington (D.C.) Area Atari Computer Enthusiasts.

10 DIM HEX\$(2),H\$(16),BINARY\$(8):H\$="0123456789 ABCDEF":POKE 201,5:? "Output to ?";:INPUT HEXS:OPEN #1,8,0,HEXS

20 FOR X=0 TO 63

30 FOR DEC=X TO 255 STEP 64:V=DEC:

GOSUB 50:V=DEC:GOSUB 60:? #1;DEC,HEX\$;" ";BINARY\$;" # ";:NEXT DEC

40 ?#1:NEXT X:END

50 FOR I=2 TO 1 STEP -1:T=INT(V/16):R=V-16\*T:HEX\$(I,I)=H\$(R+1,R+1):V=T:NEXT I:RETURN

60 FOR I=8 TO 1 STEP -1:T=INT(V/2):R=V-2\*T:BINARY\$(I,I)=STR\$(R):V=T:NEXT I:RETURN

At the "Output to ?" prompt, enter a device such as P: (printer), or S: (screen).

# Refresh Your Memory

# nd Keep Your Cool.

Introducing the ST Hard Drive System from ICD that refreshes your memory better than any other ST hard drive around. No problem.

It's the drive that not only looks cool, but stays cool too. All because of a built-in fan that knows exactly how to beat the heat. 

your most heated situations. No sweat.

approach to aesthetic case design as well. See for yourself. It's easy on the space, fitting perfectly under the monitor. And it's easy on the eyes, tailored to look great in the company of your Atari ST. With adjustable front legs, your monitor gets the lift it needs for comfortable yiewing. No. Strain. And, it's the hard drive that takes a refreshing and, it's the hard urive that takes a refreshing approach to aesthetic case design as well. See for

# From the world of sound!

### ST-Replay

ST-Replay is an exciting new program that allows you to digitize and replay various sounds, including musical instruments, television programs, even your own voice.

ST-Replay
comes with a cartridge that connects directly to
the cartridge port
of the Atari ST,
and is capable of
sampling sound
from any source
similar to a
cassette player,

HI-FI, or compact disc player. ST-Replay also accepts amplified sources, so the cleaner the sound the better the sample.

All of this only begins to describe the incredible power of this utility. You can save samples to disk, load from a disk, change the speed of a sample, cut and paste areas of a sample, and much, much more!

Color or Monochrome...\$159.95

### DIGI-DRIIM

Turn your Atari ST into a sizzling digitized drum machine with Digi-Drum. From the cool syncopated beat of a jazz improv-

isation to the martial flare of a staccato snare, you can experience it all, digitally, with this amazing program. Also Digi-Drum is compatible with the sound digitizer ST-Replay (see above).

Color or Monochrome...\$39.95

# Arcade fun!

### Airball

Now you're really in trouble said the Evil Wizard, "I'm turning you into a ball and sending you into a mansion with over 250 rooms!!

If that sounds easy I'm telling you it's not. Your ball has got a slow leak and you'll need to jump on a pump to pump yourself up, but the pumps are hidden in only a few rooms. Also

don't pump yourself up to much or you'll explode.

In the rooms you'll have to pick up objects that have been left behind, such as crosses, tins of beans, a Buddha, and a dragon statue. At the end of the maze is a spell book that will turn you back into a human again. "Sounds easy" you say to the wizard, as he laughs and says, "there is much more in store for you!"

Color only...\$39.95

### **Gold Runner**

The earth is dying. Mass migration to a new planet is our only hope. To reach this new world, travelers must pass through a

hostile section of the universe known as the Ring Worlds of Triton. Only One can lead humanity into the golden age and be worthy of the title: GOLD RUNNER. Only One shall survive the final debacle, amid the meteor storms of Triton...let it be you.

Color only...\$39.95
